

The MassHealth Drug List

MassHealth Drug List

The MassHealth Drug List (“the List”) is an alphabetical list of commonly prescribed drugs and therapeutic class tables. The List specifies which drugs need prior authorization (PA) when prescribed for MassHealth members. The prior-authorization requirements specified in the List reflect the Division’s policy described in the pharmacy regulations and provider bulletins, as well as the Division’s and the Drug Utilization Review (DUR) Board’s review of drugs within certain therapeutic classes. The List also specifies the generic over-the-counter drugs that are payable under MassHealth.

The tables provide a view of drugs within their respective therapeutic classes, along with prior-authorization requirements and clinical information about the drug. **The tables may not include all medications, dosage forms, and combination products within that therapeutic class.** The clinical information included in the tables is not intended to be comprehensive prescribing information. Prescribers and pharmacists should review the List and its applicable therapeutic class table when prescribing a drug or filling a prescription for a MassHealth member.

Any drug that does not appear on the List requires prior authorization.

Updates to the List

The updates to the List are effective immediately, unless otherwise specified. For medications that have new prior-authorization requirements, the Division’s policy permits an otherwise valid prescription written before the effective date to be filled for the life of the prescription without prior authorization. Nevertheless, the Division encourages prescribers to reevaluate the medication regimens of their MassHealth patients, and consider switching their MassHealth patients to a medication regimen that does not require prior authorization or discontinuing the affected medication(s), as soon as possible, if clinically appropriate.

Unless there is a separate prior-authorization request form that was created specifically for a drug or drug class, the Division encourages prescribers to use the standard Drug Prior Authorization Request form when requesting prior authorization for a medication.

Future Updates

Beginning April 1, 2003, the Division may update the MassHealth Drug List as frequently as twice a month. The Division will update the List as necessary on the first business day of the month or 14 calendar days later, or both. The Web site will indicate the effective dates of the updates, some of which may be effective immediately upon publication.

To sign up for e-mail alerts that will notify you when the List has been updated, go to the MassHealth Drug List on the Division’s Web site, at <http://www.state.ma.us/dma/>. Click on “Pharmacy,” click on “MassHealth Drug List,” click on “Subscribe to E-Mail Alerts,” and send the email that automatically appears on your screen and you will be subscribed.

To get a paper copy of an updated List, submit a written request to the following address or fax number.

MassHealth Publications
P.O. Box 9101
Somerville, MA 02145
Fax: 617-576-4487

Include your MassHealth provider number, address, and a contact name with your request. MassHealth Publications will send you the latest version of the List. You will need to submit another written request each time you want a paper copy.

1. New Prior-Authorization Requirements for Atypical Antipsychotics Effective July 1, 2003.

A. Atypical antipsychotics **DO** require prior-authorization for the following dosages effective 07/01/03:

Abilify (aripiprazole) – **PA > 15 mg/day**
clozapine (generic) – **PA > 900 mg/day**
Geodon (ziprasidone) – **PA > 160 mg/day**
Risperdal (risperidone) – **PA > 6 mg/day**
Seroquel (quetiapine) – **PA < 200 mg/day for more than 60 days or > 800 mg/day**
Zyprexa (olanzapine) – **PA > 20 mg/day**

B. **PA will be required** for polypharmacy, which is defined as an overlap of 60 days or more in prescriptions (for any dose or dosage form) of two or more of the following atypical antipsychotics, effective 07/01/03:

Abilify (aripiprazole)
Geodon (ziprasidone)
Risperdal (risperidone)
Seroquel (quetiapine)
Zyprexa (olanzapine)

C. Generic clozapine **does not** require prior authorization for polypharmacy. Brand name Clozaril requires PA because it has a FDA “A”-rated generic.

See Table 24, p. 56 for more information about atypical antipsychotics.

2. New Prior-Authorization Requirements and Quantity Limitations for Intranasal Corticosteroids Effective July 1, 2003.

Beconase AQ (beclomethasone), nasal spray – **PA > 1 inhaler/month**
Flonase (fluticasone), nasal spray – **PA > 1 inhaler/month**
flunisolide nasal spray – **PA > 1 inhaler/month**
Nasacort (triamcinolone), nasal spray – **PA > 1 inhaler/month**
Nasacort AQ (triamcinolone), nasal spray – **PA > 1 inhaler/month**
Nasalide # (flunisolide), nasal spray – **PA > 1 inhaler/month**
Nasarel (flunisolide), nasal spray – **PA > 1 inhaler/month**
Nasonex (mometasone), nasal spray – **PA > 1 inhaler/month**
Rhinocort Aqua (budesonide), nasal spray – **PA > 1 inhaler/2 months**

See Table 25, p. 57 for more information about intranasal corticosteroids.

3. New Prior-Authorization Request Forms

G-CSF/GM-CSF Prior Authorization Request; see p. 61
Growth Hormone Adult Prior Authorization Request; see p. 63
Growth Hormone Pediatric Prior Authorization Request; see p. 65
Immune Globulin Prior Authorization Request; see p. 69

4. New Therapeutic Tables

Atypical Antipsychotics – see Table 24, p. 56
Intranasal Corticosteroids-see Table 25, p. 57
Oral Antidiabetic Agents-see Table 26, p. 58

5. Additions

The following newly marketed drugs have been added to the MassHealth Drug List.

Alinia (nitazoxanide) – **PA > 12 years**
Hepsera (adefovir)
Iressa (gefitinib)
Oxytrol (oxybutynin) patch – **PA**

6. Change in Prior-Authorization Requirements for Selective Antihistamines

Loratadine has been added to the MassHealth Nonlegend Drug List because it is available generically and over-the-counter.

The following selective antihistamines will continue to require prior authorization:

Allegra (fexofenadine) – **PA**
Allegra D (fexofenadine/pseudoephedrine) – **PA**
Semprex-D (acrivastine/pseudoephedrine) – **PA**
Zyrtec (cetirizine) syrup – **PA > 12 years (except for LTC members)**

The following selective antihistamines will require prior authorization effective July 1, 2003.

Astelin (azelastine) – **PA > 1 inhaler/month**
Clarinet (desloratadine) – **PA**
Zyrtec (cetirizine) – **PA**
Zyrtec-D (cetirizine/pseudoephedrine) – **PA**

7. Change in Prior-Authorization Requirements for Respiratory Inhalant Products

The following respiratory inhalant products will no longer have quantity limitations, and will no longer require prior authorization.

Advair (fluticasone/salmeterol)
AeroBid (flunisolide)
albuterol, inhaler
Atrovent, inhaler (ipratropium)
Azmecort (triamcinolone)
Combivent (albuterol/ipratropium)
Flovent (fluticasone)
Foradil (formoterol)
Intal, inhaler (cromolyn)
Pulmicort, inhaler (budesonide)
Qvar (beclomethasone)
Serevent (salmeterol)
Tilade (nedocromil)
Vanceril, inhaler (beclomethasone)

Prior authorization is required for brand name respiratory inhalant products that have a FDA “A” -rated generic equivalent. In addition, the following respiratory inhalant products will continue to require prior authorization.

AeroBid-M, inhaler (flunisolide) – **PA**
Alupent, inhaler (metaproterenol) – **PA**
Maxair, inhaler (pirbuterol) – **PA**
Proventil, inhaler (albuterol) – **PA**
Proventil HFA, inhaler (albuterol) – **PA**
Ventolin, inhaler (albuterol) – **PA**
Ventolin HFA, inhaler (albuterol) – **PA**
Xopenex, inhalation solution (levalbuterol) – **PA**

8. Change in Prior-Authorization Requirements

The following change in prior-authorization status takes effect July 1, 2003.

Provigil (modafinil) – **PA**

9. Update to Therapeutic Tables

Table 12 – Antihistamines
Table 20 – Anticonvulsants
Table 23 – Respiratory Inhalant Products

10. Deletions

Antihistamine Prior Authorization Request form has been deleted (See 6.).

The following drugs have been deleted from the MassHealth Drug List because they are no longer available from the manufacturer.

Beclovent (beclomethasone)
Tri-Nasal (triamcinolone)
Vancenase (beclomethasone)

Prior-Authorization Status of Drugs

Drugs may require prior authorization for a variety of reasons. The Division determines the prior-authorization status of drugs on the List on the basis of the following:

- MassHealth program requirements; and
- ongoing evaluation of the drugs’ utilization, therapeutic efficacy, safety, and cost.

Drugs are evaluated first on safety and effectiveness, and second on cost. Some drugs require prior authorization because the Division and Drug Utilization Review Board have concluded that there are more cost-effective alternatives. With regard to all such drugs, the Division also has concluded that the more costly drugs have no significant clinically meaningful therapeutic advantage in terms of safety, therapeutic efficacy, or clinical outcome compared to those less-costly drugs used to treat the same condition.

Evaluation of a drug includes a thorough review by physicians and pharmacists using medical literature and consulting with specialists, other physicians, or both. References used may include Drug Topics Red Book, Approved Drug Products with Therapeutic Equivalence Evaluations (also known as the “Orange Book”), the Massachusetts List of Interchangeable Drug Products, AHFS Drug Information, Drug Facts and Comparisons, Micromedex, literature from peer-reviewed medical journals, and manufacturers’ product information.

In general, MassHealth strongly advocates the use of generic drugs. However, because of prevailing federal patent and rebate regulations, new-to-market generic drugs may cost more than the brand-name equivalent. For this reason MassHealth may place a prior-authorization requirement on these generic drugs. This prior-authorization requirement typically lasts for six months, until the generic price drops.

List Conventions

The List uses the following conventions:

- Brand-name products are capitalized. Generic products are in lowercase.
- Formulations of a drug (for example, salt forms, sustained release, or syrups) are not specified on the List, unless a particular formulation requires prior authorization.
- Combination products are listed with the individual ingredients separated by a slash mark (/).
- Only the generic names of over-the-counter drugs that are payable under MassHealth appear on the List. The brand names of such drugs are not listed, and therefore require prior authorization.
- Only the generic names of antihistamine/decongestant combinations are listed. The brand names of such combinations are not listed, and therefore require prior authorization.

Drug List on DMA Web Site

The MassHealth Drug List can be found on our Web site at www.mass.gov/dma, along with other information for pharmacies and prescribers.

Questions or Comments

Pharmacists and prescribers who have questions or comments about the MassHealth Drug List may contact the Drug Utilization Review Program at 1-800-745-7318 or may e-mail the MassHealth Pharmacy Program at masshealthdruglist@nt.dma.state.ma.us. The Division does not answer all e-mail inquiries directly, but will use these inquiries to develop frequently asked questions about the MassHealth Drug List for the Division's Web site.

When e-mailing a question or comment to the above e-mail address, please include your name, title, phone number, and fax number. This electronic mailbox should be used only for submitting questions or comments about the MassHealth Drug List. You will receive an automated response that acknowledges receipt of your e-mail. If you do not receive an automated reply, please resubmit your inquiry.

If a member has questions about the MassHealth Drug List, please refer the member to the MassHealth Customer Service Center at 1-800-841-2900 (TTY: 1-800-497-4648 for people with partial or total hearing loss).

Therapeutic Class Tables

Table No.	Table Name	Page
1	Immune Globulins	33
2	Hormones – Gonadotropin-Releasing Hormone Analogs	34
3	Gastrointestinal Drugs – Histamine H ₂ Antagonists/Proton Pump Inhibitors	35
4	Hematologic Agents – Hematopoietic Agents	36
5	Immunologic Agents – Immunomodulators	37
6	Impotence Agents	38

Alphabetic List

A

A/B Otic (antipyrine/benzocaine)

abacavir

abacavir/lamivudine/zidovudine

Abelcet (amphotericin B)

Abilify (aripiprazole) – **PA > 15 mg/day**

(effective 07/01/03); see Table 24, p. 56

acarbose – **PA**; see Table 26, p. 58

Accolate (zafirlukast) – **PA > 16 years**

AccuNeb (albuterol) – see Table 23, p. 55

Accupril (quinapril) – **PA**; see Table 18, p. 50

Accuretic (quinapril/hydrochlorothiazide) – **PA**;
see Table 18, p. 50

Accutane # (isotretinoin) – see Table 10, p. 42

Accuzyme (papain/urea)

acebutolol – see Table 21, p. 53

Aceon (perindopril) – **PA**; see Table 18, p. 50

acetaminophen *

Acetasol # (acetic acid)

acetazolamide

acetic acid

acetohexamide – see Table 26, p. 58

acetohydroxamic acid

acetylcysteine

Achromycin # (tetracycline)

Aciphex (rabeprazole) – **PA**; see Table 3, p. 35

acitretin – see Table 10, p. 42

Aclovate (alclometasone) – **PA**; see Table 16,
p. 48

Acova (argatroban) – **PA**

acrivastine/pseudoephedrine – **PA**; see
Table 12, p. 44

Acthar (corticotropin)

Acticin (permethrin)

Actigall # (ursodiol)

Actimmune (interferon gamma-1b) – see
Table 5, p. 37

Actiq (fentanyl transmucosal system) – **PA**; see
Table 8, p. 40

Activella (estradiol/norethindrone)

Actonel (risedronate)

Actos (pioglitazone) – see Table 26, p. 58

Acular (ketorolac)

acyclovir

A&D, topical *

Adalat # (nifedipine) – see Table 22, p. 54

adalimumab – **PA**; see Table 5, p. 37

adapalene – **PA > 25 years**; see Table 10, p. 42

Adderall # (amphetamine salts)

adefovir

Adoxa (doxycycline)

Adrenalin (epinephrine)

Adriamycin # (doxorubicin)

Adrucil # (fluorouracil)

Advair (fluticasone/salmeterol) – see Table 23, p. 55

Advicor (lovastatin/niacin) – **PA**; see Table 13, p. 45

AeroBid (flunisolide) – see Table 23, p. 55

AeroBid-M (flunisolide) – **PA**; see Table 23, p. 55

Agenerase (amprenavir)

Aggrenox (dipyridamole/aspirin)

Agrylin (anagrelide)

A-Hydrocort # (hydrocortisone)

Ak-beta (levobunolol)

Akineton (biperiden)

Akne-Mycin (erythromycin)

Ak-Pentolate # (cyclopentolate)

Ak-Polybac # (bacitracin/polymyxin B)

Ak-Spore HC # (neomycin/polymyxin B/
hydrocortisone)

Ak-Sulf # (sulfacetamide)

Aktob # (tobramycin)

Ak-tracin # (bacitracin)

Ak-Trol # (neomycin/polymyxin B/
dexamethasone)

Alamast (pemirolast)

albendazole

Albenza (albendazole)

albumin

Albuminar-25 (albumin)

albuterol

albuterol, inhalation solution; see Table 23, p. 55

albuterol, ° inhaler – see Table 23, p. 55

albuterol/ipratropium, inhalation solution – see
Table 23, p. 55

albuterol/ipratropium, inhaler – see Table 23, p. 55

alclometasone – **PA**; see Table 16, p. 48

Aldactazide # (spironolactone/hydrochlorothiazide)

Aldactone # (spironolactone)

Aldara (imiquimod)

Aldoril-25 # (methyldopa/hydrochlorothiazide)

alefacept – **PA**; see Table 5, p. 37

alendronate

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Allesse # (ethinyl estradiol/levonorgestrel)
Alferon N (interferon alfa-n3, human leukocyte derived) – see Table 5, p. 37
Alinia (nitazoxanide) – **PA > 12 years**
alitretinoin – **PA**; see Table 10, p. 42
Alkeran (melphalan)
Allegra (fexofenadine) – **PA**; see Table 12, p. 44
Allegra-D (fexofenadine/pseudoephedrine) – **PA**; see Table 12, p. 44
Allergen (benzocaine/antipyrine)
allopurinol
almotriptan – **PA > six units/month**; see Table 14, p. 46
Alocril (nedocromil)
Alomide (Iodoxamide)
Alora # (estradiol)
alosetron – **PA**
Alphagan (brimonidine)
Alphanate (antihemophilic factor, human)
AlphaNine SD (factor IX, human)
alprazolam
alprostadil – **PA**; see Table 6, p. 38
Alrex (loteprednol)
Altace (ramipril) – **PA**; see Table 18, p. 50
Altinac (tretinoin) – **PA > 25 years**; see Table 10, p. 42
Altocor (lovastatin extended release) – **PA**; see Table 13, p. 45
aluminum carbonate *
aluminum chloride
aluminum hydroxide *
Alupent # (metaproterenol), inhalation solution – see Table 23, p. 55
Alupent (metaproterenol), inhaler – **PA**; see Table 23, p. 55
amantadine
Amaryl (glimepiride) – **PA**; see Table 26, p. 58
Ambien (zolpidem) – **PA > 10 units/month**; see Table 15, p. 47
Ambisome (amphotericin B)
amcinonide – **PA**; see Table 16, p. 48
Amerge (naratriptan) – **PA**; see Table 14, p. 46
Americaine # (benzocaine)
A-Methapred # (methylprednisolone)
Amevive (alefacept) – **PA**; see Table 5, p. 37
Amicar # (aminocaproic acid)
amikacin
amiloride
amiloride/hydrochlorothiazide
Amino Acid Cervical (urea/sodium propionate/methionine/cystine/inositol)
amino acid & electrolyte IV infusion
aminocaproic acid
Amino-Cerv pH 5.5 (urea/sodium propionate/methionine/cystine/inositol)
aminogluthethimide
aminophylline
amiodarone
amitriptyline – see Table 17, p. 49
amitriptyline/chlordiazepoxide
amitriptyline/perphenazine
amlodipine – **PA**; see Table 22, p. 54
amlodipine/benazepril – **PA**; see Table 18, p. 50; see Table 22, p. 54
ammonium lactate
amoxapine – see Table 17, p. 49
amoxicillin
amoxicillin/clavulanate
Amoxil # (amoxicillin)
amphetamine salts
amphotericin B
ampicillin
ampicillin/sulbactam
amprenavir
amylase/lipase/protease
Anadrol-50 (oxymetholone)
Anafranil # (clomipramine) – see Table 17, p. 49
anagrelide
anakinra – **PA**; see Table 5, p. 37
Anaprox # (naproxen) – see Table 11, p. 43
Anaspaz # (hyoscyamine)
anastrozole
Ancef # (cefazolin)
Ancobon (flucytosine)
Androderm (testosterone)
Androgel (testosterone)
Android (methyltestosterone)
Anexsia # (hydrocodone/acetaminophen) – see Table 8, p. 40
Anolor-300 (butalbital/acetaminophen/caffeine)
Ansaid # (flurbiprofen) – see Table 11, p. 43
Antabuse (disulfiram)
anthralin
antihemophilic factor, human

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

anithemophilic factor, recombinant
anti-inhibitor coagulant complex
antipyrine/benzocaine
antithymocyte globulin, equine – see Table 1, p. 33
antithymocyte globulin, rabbit – see Table 1, p. 33
Antivert # (meclizine)
Anusol-HC # (hydrocortisone) – see Table 16, p. 48
Anzemet (dolasetron)
APF # (sodium fluoride)
Aphthasol 5% (amlexanox)
apraclonidine
Apri (ethinyl estradiol/desogestrel)
Aqua-Mephyton # (phytonadione)
Aralen Hydrochloride (chloroquine)
Aralen Phosphate # (chloroquine)
Aranesp (darbepoetin) – **PA**; see Table 4, p. 36
Arava (leflunomide)
Aredia # (pamidronate)
argatroban – **PA**
Aricept (donepezil)
Arimidex (anastrozole)
aripiprazole – **PA > 15 mg/day (effective 07/01/03)**; see Table 24, p. 56
Aristocort (triamcinolone)
Aristocort # (triamcinolone), topical – see Table 16, p. 48
Aristocort A # (triamcinolone) – see Table 16, p. 48
Aristocort Forte (triamcinolone)
Aristospan (triamcinolone)
Arixtra (fondaparinux) – **PA > 11 doses/Rx**
Aromasin (exemestane)
Artane # (trihexyphenidyl)
Arthrotec (diclofenac/misoprostol) – **PA < 60 years**; see Table 11, p. 43
artificial tears *
Asacol (mesalamine)
ascorbic acid *
aspirin *
aspirin/buffers *
Astelin (azelastine) – **PA > 1 inhaler/month (effective 07/01/03)**; see Table 12, p. 44
Astramorph PF (morphine) – see Table 8, p. 40

Atacand (candesartan) – **PA**; see Table 18, p. 50
Atarax # (hydroxyzine) – see Table 12, p. 44
atenolol – see Table 21, p. 53
atenolol/chlorthalidone – see Table 21, p. 53
Atgam (antithymocyte globulin, equine) – see Table 1, p. 33
Ativan # (lorazepam)
atorvastatin – see Table 13, p. 45
atovaquone
atovaquone/proguanil
atropine
Atrovent (ipratropium), inhalation solution – see Table 23, p. 55
Atrovent (ipratropium), inhaler – see Table 23, p. 55
Atrovent (ipratropium), nasal spray
Augmentin (amoxicillin/clavulanate)
Auralgan # (antipyrine/benzocaine)
auranofin
Aurodex (antipyrine/benzocaine)
Aurolate (gold sodium thiomalate)
aurothioglucose
Auroto # (antipyrine/benzocaine)
Avalide (irbesartan/hydrochlorothiazide) – **PA**; see Table 18, p. 50
Avandamet (rosiglitazone/metformin) – **PA**; see Table 26, p. 58
Avandia (rosiglitazone) – see Table 26, p. 58
Avapro (irbesartan) – **PA**; see Table 18, p. 50
AVC # (sulfanilamide)
Avelox (moxifloxacin)
Aventyl # (nortriptyline) – see Table 17, p. 49
Aviane # (ethinyl estradiol/levonorgestrel)
Avinza (morphine extended-release) – **PA**; see Table 8, p. 40
Avita # (tretinoin) – **PA > 25 years**; see Table 10, p. 42
Avodart (dutasteride) – **PA**
Avonex (interferon beta-1a) – see Table 5, p. 37
Axert (almotriptan) – **PA > six units/month**; see Table 14, p. 46
Axid # (nizatidine*) – see Table 3, p. 35
Axocet # (butalbital/acetaminophen)
Aygestin # (norethindrone)
Azactam (aztreonam)
azatadine – **PA (effective 07/01/03)**; see Table 12, p. 44

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

azatadine/pseudoephedrine – **PA**; see Table 12, p. 44
azathioprine
azelaic acid
azelastine – **PA > 1 inhaler/month**; see Table 12, p. 44
Azelex (azelaic acid)
azithromycin
Azmacort (triamcinolone) – see Table 23, p. 55
Azopt (brinzolamide)
aztreonam
Azulfidine # (sulfasalazine)

B

bacitracin *
bacitracin/polymyxin B
baclofen – see Table 7, p. 39
baclofen intrathecal – **PA**; see Table 7, p. 39
Bactrim # (trimethoprim/sulfamethoxazole)
Bactroban (mupirocin)
balsalazide
Banflex (orphenadrine) – see Table 7, p. 39
BayHep B (hepatitis B immune globulin, human) – see Table 1, p. 33
BayRab (rabies immune globulin IM, human) – see Table 1, p. 33
BayRho-D Full Dose (Rho(D) immune globulin IM) – see Table 1, p. 39
BayRho-D Mini Dose (Rho(D) immune globulin IM, micro-dose) – see Table 1, p. 33
BayTet (tetanus immune globulin IM, human) – see Table 1, p. 33
BCG vaccine
Bebulin VH Immuno (factor IX complex)
Becaplermin
beclomethasone, inhaler – see Table 23, p. 55
beclomethasone, nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see Table 25, p. 57
Beconase AQ (beclomethasone), nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see Table 25, p. 57
belladonna/phenobarbital
Benadryl # (diphenhydramine) – see Table 12, p. 44
benazepril – **PA**; see Table 18, p. 50

BeneFix (factor IX, recombinant)
Benicar (olmesartan) – **PA**; see Table 18, p. 50
Bentyl # (dicyclomine)
Benzaclin (benzoyl peroxide/clindamycin)
Benzamycin (benzoyl peroxide/erythromycin)
benzocaine
benzoyl peroxide *
benzoyl peroxide/clindamycin
benzoyl peroxide/erythromycin
benzoyl peroxide/hydrocortisone
benzoyl peroxide/sulfur
benztropine
bepridil – **PA**; see Table 22, p. 54
Betagan # (levobunolol)
betaine
betamethasone
betamethasone, topical ° – see Table 16, p. 48
Betapace # (sotalol) – see Table 21, p. 53
Betaseron (interferon beta 1-b) – see Table 5, p. 37
Beta-Val # (betamethasone) – see Table 16, p. 48
betaxolol – see Table 21, p. 53
bethanechol
Betimol (timolol)
bexarotene
Bextra (valdecoxib) – **PA < 60 years**; see Table 11, p. 43
bicalutamide
Bicitra (sodium citrate/citric acid)
bimatoprost
biperiden
bisacodyl *
bismuth subsalicylate *
bismuth subsalicylate/tetracycline/metronidazole
bisoprolol – see Table 21, p. 53
bisoprolol/hydrochlorothiazide – see Table 21, p. 53
bleomycin
Bleph-10 # (sulfacetamide)
Blephamide (sulfacetamide/prednisolone)
Blocadren # (timolol) – see Table 21, p. 53
bosentan – **PA**
Botox (botulinum toxin type A) – **PA**
botulinum toxin type A – **PA**
botulinum toxin type B – **PA**
Brethine # (terbutaline)
Brevibloc (esmolol) – see Table 21, p. 53
Brevicon (ethinyl estradiol/norethindrone)
brimonidine

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

brinzolamide
bromocriptine
brompheniramine * – see Table 12, p.44
brompheniramine/pseudoephedrine * – see Table 12, p. 44
budesonide, inhalation suspension – see Table 23, p. 55
budesonide, inhaler – see Table 23, p. 55
budesonide, nasal spray – **PA > 1 inhaler/ 2 months (effective 07/01/03)**; see Table 25, p. 57
bumetanide
Bumex # (bumetanide)
Buphenyl (sodium phenylbutyrate)
bupivacaine
Buprenex (buprenorphine)
buprenorphine
bupropion – see Table 17, p. 49
bupropion sustained release – see Table 17, p. 49
Buspar # (buspirone)
buspirone
butabarbital
butalbital
butalbital/acetaminophen
butalbital/acetaminophen/caffeine
butalbital/acetaminophen/codeine/caffeine
butalbital/aspirin/caffeine
butalbital/aspirin/codeine/caffeine
butenafine
Butisol (butabarbital)
butoconazole
butorphanol, injection
butorphanol, nasal spray – **PA**

C

cabergoline
Cafcit (caffeine)
caffeine
Cafergot (ergotamine/caffeine)
calamine lotion *
Calan # (verapamil) – see Table 22, p. 54
calcifediol
Calciferol (ergocalciferol)
Calcijex (calcitriol)
calcipotriene

calcitonin, human
calcitonin, salmon
calcitriol
calcium acetate
calcium carbonate *
calcium citrate *
calcium glubionate *
calcium gluconate *
calcium phosphate *
Calderol (calcifediol)
Camptosar (irinotecan)
Candidas (caspofungin)
candesartan – **PA**
Cantil (mepenzolate)
capecitabine
Capex (fluocinolone) – **PA**; see Table 16, p. 48
Capitol (chloroxine)
Capoten # (captopril) – see Table 18, p. 50
Capozide # (captopril/hydrochlorothiazide) – see Table 18, p. 50
capsaicin *
captopril – see Table 18, p. 50
captopril/hydrochlorothiazide – see Table 18, p. 50
Carac (fluorouracil)
Carafate # (sucralfate)
carbamazepine – see Table 20, p. 52
carbamide peroxide *
Carbatrol (carbamazepine) – see Table 20, p. 52
carbenicillin
carbidopa
carbidopa/levodopa
carbinoxamine – see Table 12, p. 44
carbinoxamine/pseudoephedrine – see Table 12, p. 44
carboplatin
Cardene # (nicardipine) – see Table 22, p. 54
Cardizem # (diltiazem) – see Table 22, p. 54
Cardura # (doxazosin) – see Table 19, p. 51
carisoprodol – see Table 7, p. 39
Carmol (urea)
Carnitor (levocarnitine)
carteolol, ophthalmic
carteolol, oral – **PA**; see Table 21, p. 53
Cartia (diltiazem) – see Table 22, p. 54
Cartrol (carteolol) – **PA**; see Table 21, p. 53
carvedilol – **PA**; see Table 21, p. 53
casanthranol *

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Casodex (bicalutamide)	cetirizine/pseudoephedrine – PA (effective 07/01/03) ; see Table 12, p. 44
caspofungin	cevimeline
castor oil/peru balsam/trypsin	Chemet (succimer)
Cataflam # (diclofenac)	chloral hydrate
Catapres # (clonidine)	chlorambucil
Caverject (alprostadil) – PA ; see Table 6, p. 38	chloramphenicol
Cebocap (lactose)	chlordiazepoxide
Ceclor # (cefaclor)	chlorhexidine gluconate *
Cedax (ceftibuten)	Chloroptic # (chloramphenicol)
Ceenu (lomustine)	chloroquine
cefaclor	chlorothiazide
cefadroxil	chloroxine
cefazolin	chloroxyleneol/pramoxine/hydrocortisone
cefdinir	chlorpheniramine * – see Table 12, p. 44
cefditoren	chlorpheniramine/phenylephrine – see Table 12, p. 44
cefepime	chlorpheniramine/pseudoephedrine * – see Table 12, p. 44
cefixime	chlorpheniramine/pyrilamine/phenylephrine – see Table 12, p. 44
Cefizox (ceftizoxime)	chlorpromazine
Cefotan (cefotetan)	chlorpropamide – see Table 26, p. 58
cefotaxime	chlorthalidone
cefotetan	chlorzoxazone
cefoxitin	cholestyramine
cefpodoxime	choline salicylate/magnesium salicylate
cefprozil	Cibacalcin (calcitonin, human)
ceftazidime	ciclopirox
ceftibuten	cidofovir
Ceftin # (cefuroxime)	cilostazol
ceftizoxime	Ciloxan (ciprofloxacin)
ceftriaxone	cimetidine * – see Table 3, p. 35
cefuroxime	Cinobac (cinoxacin)
Cefzil (cefprozil)	cinoxacin
Celebrex (celecoxib) – PA < 60 years ; see Table 11, p. 43	Cipro (ciprofloxacin)
celecoxib – PA < 60 years ; see Table 11, p. 43	ciprofloxacin
Celestone (betamethasone)	cisplatin
Cellexa (citalopram) – PA ; see Table 17, p. 49	citalopram – PA ; see Table 17, p. 49
Cellcept (mycophenolate)	citrate salts
Celontin (methsuximide) – see Table 20, p. 52	Claforan # (cefotaxime)
Cenestin (estrogens, conjugated)	Clarinox (desloratadine) – PA (effective 07/01/03) ; see Table 12, p. 44
cephalexin	clemastine – see Table 12, p. 44
Cephulac # (lactulose)	Cleocin # (clindamycin)
Cerezyme (imiglucerase)	Climara # (estradiol)
Cerumenex (triethanolamine)	Clindagel (clindamycin)
cetirizine syrup – PA > 12 years (except for LTC members) ; see Table 12, p. 44	
cetirizine tablets – PA (effective 07/01/03) ; see Table 12, p. 44	

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

clindamycin
Clindets # (clindamycin)
Clinoril # (sulindac) – see Table 11, p. 43
clobetasol ° – see Table 16, p. 48
clocortolone – **PA**; see Table 16, p. 48
Cloderm (clocortolone) – **PA**; see Table 16, p. 48
clomipramine – see Table 17, p. 49
clonazepam – see Table 20, p. 52
clonidine
clonidine/chlorthalidone
clopidogrel
clorazepate – see Table 20, p. 52
Clorpres (clonidine/chlorthalidone)
clotrimazole *
clotrimazole/betamethasone
clozapine – **PA > 900 mg/day (effective 07/01/03)**; see Table 24, p. 56
Clozaril # (clozapine) – **PA > 900 mg/day (effective 07/01/03)**; see Table 24, p. 56
cod liver oil *
codeine – see Table 8, p. 40
codeine/acetaminophen – see Table 8, p. 40
codeine/aspirin – see Table 8, p. 40
Cogentin # (benztropine)
Cognex (tacrine)
Colazal (balsalazide)
colchicine/probenecid
colesevelam
Colestid (colestipol)
colestipol
colistimethate
colistin/hydrocortisone/neomycin
collagenase
colloidal oatmeal *
Col-Probenecid # (colchicine/probenecid)
Coly-Mycin (colistimethate)
CoLyte # (polyethylene glycol-electrolyte solution)
Combipatch (estradiol/norethindrone)
Combipres (clonidine/chlorthalidone)
Combivent (albuterol/ipratropium) – see Table 23, p. 55
Combivir (lamivudine/zidovudine)
Compazine # (prochlorperazine)
Compro (prochlorperazine)
Comtan (entacapone)
Concerta (methylphenidate)
Condylox (podofilox)
Constulose (lactulose)
Copaxone (glatiramer)
Copegus (ribavirin)
copper IUD
Cordarone # (amiodarone)
Cordran (flurandrenolide) – **PA**; see Table 16, p. 48
Coreg (carvedilol) – **PA**; see Table 21, p. 53
Corgard # (nadolol) – see Table 21, p. 53
Cormax # (clobetasol) – see Table 16, p. 48
Cortane-B (chloroxylenol/pramoxine/hydrocortisone)
Cortef # (hydrocortisone)
corticotropin
Cortifoam (hydrocortisone)
cortisone
Cortisporin # (neomycin/polymyxin B/hydrocortisone)
Cortisporin-TC (colistin/hydrocortisone/neomycin)
Cortomycin (neomycin/polymyxin B/hydrocortisone)
Cortrosyn (cosyntropin)
Corzide (nadolol/bendroflumethiazide) – see Table 21, p. 53
Cosopt (dorzolamide/timolol)
cosyntropin
Coumadin # (warfarin)
Covera-HS (verapamil) – see Table 22, p. 54
Cozaar (losartan) – **PA**; see Table 18, p. 50
Creon (amylase/lipase/protease)
Crixivan (indinavir)
Crolom (cromolyn)
cromolyn
cromolyn, inhalation solution – see Table 23, p. 55
cromolyn, inhaler – see Table 23, p. 55
crotamiton
Cuprimine (penicillamine)
Cutivate (fluticasone) – **PA**; see Table 16, p. 48
cyanocobalamin *
Cyclessa (ethinyl estradiol/desogestrel)
cyclobenzaprine – see Table 7, p. 39
Cyclocort (amcinonide) – **PA**; see Table 16, p. 48
Cyclogyl # (cyclopentolate)
Cyclomydril (cyclopentolate/phenylephrine)
cyclopentolate

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

cyclopentolate/phenylephrine
cyclophosphamide
cyclosporine
Cylert # (pemoline)
cyproheptadine – see Table 12, p. 44
Cystadane (betaine)
Cystagon (cysteamine)
cysteamine
Cystospaz # (hyoscyamine)
Cytadren (aminogluthetimide)
cytarabine
CytoGam (cytomegalovirus immune globulin IV, human) – see Table 1, p. 33
cytomegalovirus immune globulin IV, human – see Table 1, p. 33
Cytomel (liothyronine)
Cytosar-U # (cytarabine)
Cytotec # (misoprostol)
Cytovene (ganciclovir)
Cytosan # (cyclophosphamide)
Cytra-2 (sodium citrate/citric acid)
Cytra-3 (potassium citrate/sodium citrate/citric acid)
Cytra-K (potassium citrate/citric acid)

D

dacarbazine
Dalmane # (flurazepam) – **PA > 10 units/month**; see Table 15, p. 47
dalteparin
danazol
Danocrine # (danazol)
Dantrium (dantrolene)
dantrolene
dapson
Daramide (dichlorophenamide)
Daraprim (pyrimethamine)
darbepoetin alpha – **PA**; see Table 4, p. 36
Darvocet-N # (propoxyphene napsylate/acetaminophen) – see Table 8, p. 40
Darvon # (propoxyphene) – see Table 8, p. 40
Darvon-N (propoxyphene napsylate) – see Table 8, p. 40
Daypro # (oxaprozin) – see Table 11, p. 43
DDAVP # (desmopressin)
Deca-Durabolin (nandrolone)

Declomycin (demeclocycline)
deferoxamine
Delatestryl (testosterone)
delavirdine
Delestrogen # (estradiol)
Deltasone # (prednisone)
Demadex # (torsemide)
demeclocycline
Demerol # (meperidine) – see Table 8, p. 40
Demser (metyrosine)
Demulen # (ethinyl estradiol/ethynodiol)
Denavir (penciclovir)
Depacon (valproate) – see Table 20, p. 52
Depakene # (valproic acid) – see Table 20, p. 52
Depakote (divalproex) – see Table 20, p. 52
Depen (penicillamine)
Depo-Estradiol (estradiol)
Depo-Medrol # (methylprednisolone)
Deponit (nitroglycerin)
Depo-Provera (medroxyprogesterone)
Depo-Testosterone (testosterone)
Derma-Smoother/FS (fluocinolone) – **PA**; see Table 16, p. 48
Dermatop (prednicarbate) – **PA**; see Table 16, p. 48
Desferal (deferoxamine)
desipramine – see Table 17, p. 49
desloratadine – **PA (effective 07/01/03)**; see Table 12, p. 44
desmopressin
Desogen # (ethinyl estradiol/desogestrel)
desonide – see Table 16, p. 48
DesOwen # (desonide) – see Table 16, p. 48
desoximetasone – see Table 16, p. 48
Desoxyn (methamphetamine) – **PA**
Desyrel # (trazodone) – see Table 17, p. 49
Detrol (tolterodine)
Dexacidin (neomycin/polymyxin B/dexamethasone)
Dexacine (neomycin/polymyxin B/dexamethasone)
dexamethasone
dexamethasone/neomycin
Dexasporin (neomycin/polymyxin B/dexamethasone)
dextbrompheniramine/pseudoephedrine – see Table 12, p. 44
dexchlorpheniramine – see Table 12, p. 44

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Dexedrine # (dextroamphetamine)
Dexferrum (iron dextran)
dexmethylphenidate
dextroamphetamine
dextrose
Dextrostat # (dextroamphetamine)
D.H.E. 45 (dihydroergotamine mesylate)
DHT (dihydrotachysterol)
DiaBeta (glyburide) – **PA**; see Table 26, p. 58
Diabinese # (chlorpropamide) – see Table 26, p. 58
Diamox # (acetazolamide)
Diastat (diazepam) – see Table 20, p. 52
diazepam – see Table 7, p.39; see Table 20, p. 52
diazoxide
dichlorphenamide
diclofenac – see Table 11, p. 43
diclofenac/misoprostol – **PA < 60 years**; see Table 11, p. 43
dicloxacillin
dicyclomine
didanosine
Didronel (etidronate)
dienestrol
Differin (adapalene) – **PA > 25 years**; see Table 10, p. 42
diflorasone – see Table 16, p. 48
Diflucan (fluconazole)
diflunisal – see Table 11, p. 43
Digitek (digoxin)
digoxin
dihydrocodeine/aspirin/cafeine
dihydroergotamine
dihydrotachysterol
Dilacor # (diltiazem) – see Table 22, p. 54
Dilantin (phenytoin) – see Table 20, p. 52
Dilatrate-SR (isosorbide)
Dilaudid # (hydromorphone) – see Table 8, p. 40
diltiazem – see Table 22, p. 54
Diovan (valsartan) – **PA**; see Table 18, p. 50
Diovan HCT (valsartan/hydrochlorothiazide) – **PA**; see Table 18, p. 50
Dipentum (olsalazine)
diphenhydramine * – see Table 12, p. 44
diphenhydramine/pseudoephedrine – see Table 12, p. 44
diphenoxylate/atropine
dipivefrin
Diprolene (betamethasone) – **PA**; see Table 16, p. 48
Diprolene AF (betamethasone) – **PA**; see Table 16, p. 48
Diprosone (betamethasone) – **PA**; see Table 16, p. 48
dipyridamole
dipyridamole/aspirin
Diquinol (iodoquinol)
dirithromycin
Disalcid # (salsalate)
disopyramide
disulfiram
Ditropan # (oxybutynin)
Diuril # (chlorothiazide)
divalproex – see Table 20, p. 52
docetaxel
docusate sodium *
dofetilide
dolasetron
Dolobid # (diflunisal) – see Table 11, p. 43
Dolophine # (methadone) – see Table 8, p. 40
Domeboro # (aluminum acetate)
donepezil
Doral (quazepam) – **PA**; see Table 15, p. 47
dornase alpha
Doryx (doxycycline)
dorzolamide
dorzolamide/timolol
Dostinex (cabergoline)
Dovonex (calcipotriene)
doxazosin – see Table 18, p. 50
doxepin – see Table 17, p. 49
doxercalciferol
doxorubicin
doxycycline
Drisdol # (ergocalciferol)
dronabinol – **PA**
droperidol
Droxia (hydroxyurea)
Drysol (aluminum chloride)
DTIC-Dome # (dacarbazine)
DuoNeb (albuterol/ipratropium) – see Table 23, p. 55
Duphalac (lactulose)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Duragesic (fentanyl) – **PA > 30 patches/month**;

PA > 200 mcg/hour; see Table 8, p. 40

Duramorph (morphine) – see Table 8, p. 40

Duricef # (cefadroxil)

dutasteride – **PA**

Dyazide # (triamterene/hydrochlorothiazide)

Dynabac (dirithromycin)

Dynacin # (minocycline)

Dynacirc (isradipine) – **PA**; see Table 22, p. 54

Dynapen (dicloxacillin)

Dyphylline-GG (dyphylline/guaifenesin)

dyphylline/guaifenesin

E

echothiophate iodine

econazole

Econopred # (prednisolone)

Edecrin (ethacrynic acid)

Edex (alprostadil) – **PA**; see Table 6, p. 38

efavirenz

Effexor (venlafaxine) – **PA**; see Table 17, p. 49

Efudex (fluorouracil)

Elavil # (amitriptyline) – see Table 17, p. 49

Eldepryl # (selegiline)

electrolyte solution, pediatric *

eletriptan – **PA**; see Table 14, p. 46

Elidel (pimecrolimus)

Eligard (leuprolide) – **PA**; see Table 2, p. 34

Elimite # (permethrin)

Elitek (rasburicase)

Elixophyllin-KI (theophylline/potassium iodide)

Ellence (epirubicin)

Elmiron (pentosan)

Elocon (mometasone) – **PA**; see Table 16, p. 48

Eloxatin (oxaliplatin)

Emadine (emedastine)

Embeline # (clobetasol) – see Table 16, p. 48

Emcyt (estramustine)

emedastine

Emgel # (erythromycin)

EMLA (lidocaine/prilocaine)

E-Mycin # (erythromycin)

enalapril – see Table 18, p. 50

enalapril/felodipine – **PA**; see Table 18, p. 50;
see Table 22, p. 54

enalapril/hydrochlorothiazide – see Table 18, p. 50

Enbrel (etanercept) – **PA**; see Table 5, p. 37

Endocet (oxycodone/acetaminophen) – see Table 8,
p. 40

Endocodone (oxycodone) – see Table 8, p. 40

Endodan (oxycodone/aspirin) – see Table 8, p. 40

Enduron # (methyclothiazide)

Enduronyl (methyclothiazide/deserpidine)

enfuvirtide – **PA**

Engerix-B (hepatitis B, recombinant vaccine)

enoxaparin

Enpresse (levonorgestrel/ethinyl estradiol)

entacapone

Entocort (budesonide)

Enulose (lactulose)

Epifoam (hydrocortisone/pramoxine)

Epifrin # (epinephrine)

epinephrine

Epipen (epinephrine)

epirubicin

Epitol (carbamazepine) – see Table 20, p. 52

Epivir (lamivudine)

eplerenone – **PA**

epoetin alfa – **PA**; see Table 4, p. 36

Epogen (epoetin alfa) – **PA**; see Table 4, p. 36

epoprostenol

eprosartan – **PA**; see Table 18, p. 50

Equagesic (meprobamate/aspirin)

Equanil (meprobamate)

ergocalciferol

ergoloid

Ergomar (ergotamine)

ergotamine

ergotamine/caffeine

Eryped # (erythromycin)

Ery-tab (erythromycin)

Erythrocin (erythromycin)

erythromycin

erythromycin/sulfisoxazole

escitalopram – **PA**; see Table 17, p. 49

Esclim # (estradiol)

Esgic # (butalbital/acetaminophen/caffeine)

Eskalith # (lithium)

esmolol – see Table 21, p. 53

esomeprazole – **PA**; see Table 3, p. 35

estazolam – **PA > 10 units/month**; see
Table 15, p. 47

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Estinyl (ethinyl estradiol)
Estrace # (estradiol)
Estraderm (estradiol)
estradiol
estradiol/medroxyprogesterone
estradiol/norethindrone
estramustine
Estratab # (estrogens, esterified)
Estratest (estrogens, esterified/
methyltestosterone)
Estring (estradiol)
estriol
estrogens, conjugated
estrogens, conjugated/medroxyprogesterone
estrogens, esterified
estrogens, esterified/methyltestosterone
estropipate
Estrostep Fe (ethinyl estradiol/norethindrone)
Estrostep 21 (ethinyl estradiol/norethindrone)
etanercept – **PA**; see Table 5, p. 37
ethacrynic acid
ethambutol
Ethezyme (papain/urea)
ethinyl estradiol
ethinyl estradiol/desogestrel
ethinyl estradiol/drospirenone
ethinyl estradiol/ethynodiol
ethinyl estradiol/levonorgestrel
ethinyl estradiol/norelgestromin
ethinyl estradiol/norethindrone
ethinyl estradiol/norgestimate
ethinyl estradiol/norgestrel
Ethmazine (moricizine)
ethosuximide – see Table 20, p. 52
ethotoin – see Table 20, p. 52
etidronate
etodolac – see Table 11, p. 43
etonogestrel/ethinyl estradiol
etoposide
etretinate – see Table 10, p. 42
Eulexin # (flutamide)
Eurax (crotamiton)
Evista (raloxifene)
Evoxac (cevimeline)
Exelderm (sulconazole)
Exelon (rivastigmine)
exemestane

ezetimibe – **PA**

F

factor IX complex
factor IX, human
factor IX, recombinant
famciclovir
famotidine * – see Table 3, p. 35
Famvir (famciclovir)
Farbital (butalbital/aspirin/caffeine)
Fareston (toremifene)
Faslodex (fulvestrant) – **PA**
fat emulsion, intravenous
Feiba VH Immuno (anti-inhibitor coagulant complex)
felbamate – see Table 20, p. 52
Felbatol (felbamate) – see Table 20, p. 52
Feldene # (piroxicam) – see Table 11, p. 43
felodipine – **PA**; see Table 22, p. 54
Femara (letrozole)
Femhrt (ethinyl estradiol/norethindrone)
fenofibrate
fenoprofen – see Table 11, p. 43
fentanyl, injection – see Table 8, p. 40
fentanyl, transdermal system – **PA** > 30
patches/month; **PA** > 200 mcg/hour; see
Table 8, p. 40
fentanyl, transmucosal system – **PA**; see Table 8,
p. 40
Ferrlecit (sodium ferric gluconate complex)
ferrous fumarate *
ferrous gluconate *
ferrous sulfate *
fexofenadine – **PA**; see Table 12, p. 44
fexofenadine/pseudoephedrine – **PA**; see Table 12,
p. 44
filgrastim – **PA**; see Table 4, p. 36
finasteride – **PA**
Finevin (azelaic acid)
Fioricet # (butalbital/acetaminophen/caffeine)
Fioricet/codeine # (butalbital/acetaminophen/
codeine/caffeine)
Fiorinal # (butalbital/aspirin/caffeine)
Fiorinal/codeine # (butalbital/codeine/aspirin/
caffeine)
Fiorep (butalbital/acetaminophen/caffeine)
Fiortal (butalbital/aspirin/caffeine)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

- Flagyl # (metronidazole)
Flarex # (fluorometholone)
flavoxate
flecainide
Flexeril # (cyclobenzaprine) – see Table 7, p. 39
Flexoject (orphenadrine) – see Table 7, p. 39
Flexon (orphenadrine) – see Table 7, p. 39
Flolan (epoprostenol)
Flomax (tamsulosin) – **PA**; see Table 19, p. 51
Flonase (fluticasone), nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see Table 25, p. 57
Florinef (fludrocortisone)
fluormetholone
Flovent (fluticasone) – see Table 23, p. 55
Floxin (ofloxacin)
fluconazole
flucytosine
fludrocortisone
Flumadine # (rimantadine)
flunisolide, ° inhaler – see Table 23, p. 55
flunisolide, ° nasal spray – **PA > 1 inhaler/month**; see Table 25, p. 57
fluocinolone ° – see Table 16, p. 48
fluocinonide – see Table 16, p. 48
fluorides
Fluoritab (sodium fluoride)
fluorometholone
fluorometholone/sulfacetamide
Fluor-op (fluorometholone)
Fluoroplex (fluorouracil)
fluorouracil
fluoxetine ° – see Table 17, p. 49
fluoxymersterone
fluphenazine
flurandrenolide ° – see Table 16, p. 48
flurazepam – **PA > 10 units/month**; see Table 15, p. 47
flurbiprofen – see Table 11, p. 43
fluroxamine
flutamide
fluticasone, inhalation – see Table 23, p. 55
fluticasone, nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see Table 25, p. 57
fluticasone, topical – **PA**; see Table 16, p. 48
fluticasone/salmeterol – see Table 23, p. 55
fluvastatin – see Table 13, p. 45
fluvastatin extended release – see Table 13, p. 45
Fluvirin (influenza vaccine)
fluvoxamine – see Table 17, p. 49
FML # (fluorometholone)
FML-S (fluorometholone/sulfacetamide)
Focalin (dexamethylphenidate)
folic acid *
fondaparinux – **PA > 11 doses/Rx**
Foradil (formoterol) – see Table 23, p. 55
formaldehyde
Formaldehyde-10 (formaldehyde)
formoterol – see Table 23, p. 55
Fortaz (ceftazidime)
Forteo (teriparatide) – **PA**
Fortovase (saquinavir)
Fosamax (alendronate)
foscarnet
Foscavir (foscarnet)
fosfomycin
fosinopril – **PA**; see Table 18, p. 50
Fragmin (dalteparin)
Frova (frovatriptan) – **PA**; see Table 14, p. 46
frovatriptan – **PA**; see Table 14, p. 46
fulvestrant – **PA**
Fulvicin # (griseofluvin)
Fungizone (amphotericin B)
Furacin (nitrofurazone)
Furadantin (nitrofurantoin)
furazolidone
furosemide
Furoxone (furazolidone)
Fuzeon (enfuvirtide) – **PA**
- G**
- gabapentin – **PA > 18 years**; see Table 20, p. 52
Gabitril (tiagabine) – **PA > 18 years**; see Table 20, p. 52
galantamine
Gamimune N (immune globulin IV, human) – **PA**; see Table 1, p. 33
Gammagard S/D (immune globulin IV, human) – **PA**; see Table 1, p. 33
Gammar-P IV (immune globulin IV, human) – **PA**; see Table 1, p. 33

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Gamulin Rh (Rho(D) immune globulin IM) – see Table 1, p. 33
ganciclovir
Gantrisin (sulfisoxazole)
Gastrocrom (cromolyn)
gatifloxacin
gefitinib
gelatin
gemcitabine
gemfibrozil
Gemzar (gemcitabine)
Gengraf (cyclosporine)
Genora (ethinyl estradiol/norethindrone)
Genotropin (somatropin) – **PA**; see Table 9, p. 41
Gentacidin (gentamicin)
Gentak (gentamicin)
gentamicin
Geocillin (carbenicillin)
Geodon (ziprasidone) – **PA > 160 mg/day (effective 07/01/03)**; see Table 24, p. 56
Geodon (ziprasidone), injection
glatiramer
Gleevec (imatinib)
glimepiride – **PA**; see Table 26, p. 58
glipizide – see Table 26, p. 58
glipizide extended release – **PA**; see Table 26, p. 58
glipizide/metformin – **PA**; see Table 26, p. 58
glucagon
gluconic acid/citric acid
Glucophage # (metformin) – see Table 26, p. 58
Glucophage XR (metformin extended release) – see Table 26, p. 58
Glucotrol # (glipizide) – see Table 26, p. 58
Glucotrol XL (glipizide extended release) – **PA**; see Table 26, p. 58
Glucovance (glyburide/metformin) – **PA**; see Table 26, p. 58
glyburide ° – see Table 26, p. 58
glyburide/metformin – **PA**; see Table 26, p. 58
glyburide, micronized – see Table 26, p. 58
glycerin
glycopyrrolate
Glynase # (glyburide) – see Table 26, p. 58
Glyset (miglitol) – **PA**; see Table 26, p. 58
gold sodium thiomalate

GoLYTELY # (polyethylene glycol-electrolyte solution)
goserelin – **PA**; see Table 2, p. 34
granisetron
Granul-derm (castor oil/peru balsam/trypsin)
Granulex # (castor oil/peru balsam/trypsin)
Grifulvin # (griseofulvin)
griseofulvin
Gris-Peg # (griseofulvin)
guaifenesin/dyphylline
guanabenz
guanfacine
Gynazole-1 (butoconazole)
Gynodiol (estradiol)

H

halcinonide – **PA**; see Table 16, p. 48
Halcion # (triazolam) – **PA > 10 units/month**; see Table 15, p. 47
Haldol # (haloperidol)
halobetasol – **PA**; see Table 16, p. 48
Halog (halcinonide) – **PA**; see Table 16, p. 48
Halog-E (halcinonide) – **PA**; see Table 16, p. 48
haloperidol
Haponal (belladonna/phenobarbital)
Havrix (hepatitis A vaccine, inactivated)
HBIG (hepatitis B immune globulin, human) – see Table 1, p. 33
Hectorol (doxercalciferol)
Helidac (bismuth subsalicylate/tetracycline/metronidazole)
Helixate (antithemophilic factor, recombinant)
Hemofil-M (antithemophilic factor, recombinant)
Hep-Lock # (heparin)
heparin
heparin lock flush
hepatitis A vaccine, inactivated
hepatitis A vaccine inactivated/hepatitis B, recombinant vaccine
hepatitis B immune globulin, human – see Table 1, p. 33
hepatitis B, recombinant vaccine
Hepsera (adefovir)
Herceptin (trastuzumab)
hexachlorophene
Hiprex (methenamine)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Hivid (zalcitabine)
homatropine
Humate-P (antihemophilic factor, human)
Humatin # (paromomycin)
Humatrope (somatropin) – **PA**; see Table 9, p. 41
Humira (adalimumab) – **PA**; see Table 5, p. 37
Hyalgan (sodium hyaluronate) – **PA**
hyaluronate
hydralazine
hydralazine/hydrochlorothiazide
Hydra-zide # (hydralazine/hydrochlorothiazide)
Hydrea # (hydroxyurea)
Hydrocet # (hydrocodone/acetaminophen) – see Table 8, p. 40
hydrochlorothiazide
hydrocodone – see Table 8, p. 40
hydrocodone/acetaminophen – see Table 8, p. 40
hydrocortisone
hydrocortisone, topical ° – see Table 16, p. 48
hydrocortisone/lidocaine
hydrogen peroxide *
hydromorphone
hydroxychloroquine
hydroxycobalamin
hydroxyprogesterone
hydroxyurea
hydroxyzine – see Table 12, p. 44
hylan polymers – **PA**
Hylutin (hydroxyprogesterone)
hyoscyamine
hyoscyamine/phenobarbital
Hyosol/SL (hyoscyamine, sublingual)
Hyospaz (hyoscyamine)
HyperHep (hepatitis B immune globulin, human) – see Table 1, p. 33
HypRho-D (Rho(D) immune globulin IM) – see Table 1, p. 33
HypRho-D Mini-Dose (Rho(D) immune globulin IM micro-dose) – see Table 1, p. 33
Hytakerol (dihydrotachysterol)
Hytone # (hydrocortisone) – see Table 16, p. 48
Hytrin # (terazosin) – see Table 19, p. 51
Hyzaar (losartan/hydrochlorothiazide) – **PA**; see Table 18, p. 50

I

ibuprofen * – see Table 11, p. 43
imatinib
Imdur # (isosorbide)
imiglucerase
imipenem/cilastatin
imipramine – see Table 17, p. 49
imiquimod
Imitrex (sumatriptan) – **PA**; see Table 14, p. 46
Imitrex (sumatriptan), injection – **PA > six units/month**; see Table 14, p. 46
immune globulin IV, human – **PA**; see Table 1, p. 33
Imogam Rabies-HT (rabies immune globulin IM, human) – see Table 1, p. 33
Imovax (rabies vaccine)
Imuran # (azathioprine)
Inapsine # (droperidol)
indapamide
Inderal # (propranolol) – see Table 21, p. 53
Inderide # (propranolol/hydrochlorothiazide) – see Table 21, p. 53
indinavir
Indocin # (indomethacin) – see Table 11, p. 43
indomethacin – see Table 11, p. 43
Infed (iron dextran)
Infergen (interferon alfacon-1) – see Table 5, p. 37
Inflamase # (prednisolone/sodium phosphate)
infliximab – **PA**; see Table 5, p. 37
influenza vaccine
Infumorph (morphine) – see Table 8, p. 40
Inspra (eplerenone) – **PA**
insulin, prefilled syringes – **PA**
insulins *
Intal# (cromolyn), inhalation solution – see Table 23, p. 55
Intal (cromolyn), inhaler – see Table 23, p. 55
interferon alfa-n3, human leukocyte derived – see Table 5, p. 37
interferon alfa-2a – see Table 5, p. 37
interferon alfa-2b – see Table 5, p. 37
interferon alfa-2b recombinant/ribavirin – see Table 5, p. 37
interferon alfacon-1 – see Table 5, p. 37
interferon beta-1a – see Table 5, p. 37
interferon beta-1b – see Table 5, p. 37
interferon gamma-1b – see Table 5, p. 37

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Intron A (interferon alfa-2b) – see Table 5, p. 37
Inversine (mecamylamine)
Invirase (saquinavir)
iodine *
iodoquinol/hydrocortisone
lopidine (apraclonidine)
ipratropium, inhalation solution – see Table 23, p. 55
ipratropium, inhaler – see Table 23, p. 55
ipratropium, nasal spray
irbesartan – **PA**; see Table 18, p. 50
irbesartan/hydrochlorothiazide – **PA**; see Table 18, p. 50
Iressa (gefitinib)
irinotecan
iron dextran
iron sucrose
Ismo # (isosorbide)
isoetharine – see Table 23, p. 54
isoniazid
isopropyl alcohol *
Isoptin # (verapamil) – see Table 22, p. 54
Isordil # (isosorbide)
isosorbide
isotretinoin – see Table 10, p. 42
isradipine – **PA**; see Table 22, p. 54
itraconazole
Iveegam EN (immune globulin IV, human) – **PA**; see Table 1, p. 33
ivermectin

J

Japanese encephalitis virus vaccine
Jenest-28 (ethinyl estradiol/norethindrone)
JE-Vax (Japanese encephalitis virus vaccine)

K

Kadian (morphine) – see Table 8, p. 40
Kaletra (lopinavir/ritonavir)
Kaochlor (potassium chloride)
kaolin/pectin *
Kaon-Cl (potassium chloride)
Kariva (ethinyl estradiol/desogestrel)
Kayexalate # (sodium polystyrene sulfonate)
K-Dur # (potassium chloride)
Keflex # (cephalexin)

Keftab (cephalexin)
Kefurox # (cefuroxime)
Kemadrin (procyclidine)
Kenalog # (triamcinolone) – see Table 16, p. 48
Keppra (levetiracetam) – **PA**; see Table 20, p. 52
Kerlone # (betaxolol) – see Table 21, p. 53
ketamine
ketoconazole
ketoprofen * – see Table 11, p. 43
ketorolac – see Table 11, p. 43
ketotifen
Kineret (anakinra) – **PA**; see Table 5, p. 37
Kionex # (sodium polystyrene sulfonate)
Klaron (sulfacetamide)
Klonopin # (clonazepam) – see Table 20, p. 52
K-Lor # (potassium chloride)
Klor-Con # (potassium bicarbonate)
Klotrix (potassium iodide)
K-Lyte (potassium bicarbonate)
K-Lyte/Cl # (potassium chloride/potassium bicarbonate)
Koate-DVI (antihemophilic factor, human)
Kogenate (antihemophilic factor, recombinant)
Konyne 80 (factor IX complex)
Kovia (papain/urea)
K-Phos M.F. (potassium phosphate/sodium phosphate)
K-Phos Neutral (potassium phosphate/dibasic sodium phosphate/monobasic sodium phosphate)
K-Phos No. 2 (potassium phosphate/sodium phosphate/phosphorus)
K-Phos Original (sodium phosphate)
Kristalose (lactulose)
K-Tab (potassium chloride)
Kutapressin (liver derivative complex)
K-Vescent Potassium Chloride (potassium chloride)
Kytril (granisetron)

L

labetalol – see Table 21, p. 53
Lac-Hydrin # (ammonium lactate)
LAClotion (ammonium lactate)
lactic acid #
lactic acid/vitamin E
Lactinol (lactic acid)
Lactinol-E (lactic acid/vitamin E)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

lactose
lactulose
Lamictal (lamotrigine) – see Table 20, p. 52
Lamisil (terbinafine)
lamivudine
lamivudine/zidovudine
lamotrigine – see Table 20, p. 52
lanolin *
Lanoxicaps (digoxin)
Lanoxin # (digoxin)
lansoprazole – **PA > 16 years (except suspension for LTC members)**; see Table 3, p. 35
lansoprazole/amoxicillin/clarithromycin
Lantus (insulin glargine)
Lariam (mefloquine)
Larodopa (levodopa)
Lasix # (furosemide)
latanoprost
Lazer Formalyde (formaldehyde)
L-Carnitine (levocarnitine)
leflunomide
lepirudin – **PA**
Lescol (fluvastatin) – see Table 13, p. 45
Lescol XL (fluvastatin extended release) – see Table 13, p. 45
letrozole
leucovorin
Leukeran (chlorambucil)
Leukine (sargramostim) – **PA**; see Table 4, p. 36
leuprolide – **PA**; see Table 2, p. 34
levalbuterol – **PA**; see Table 23, p. 55
Levaquin (levofloxacin)
Levatol (penbutolol) – **PA**; see Table 21, p. 53
Levbid (hyoscyamine)
levetiracetam – **PA**; see Table 20, p. 52
Levlen # (ethinyl estradiol/levonorgestrel)
Levlite (ethinyl estradiol/levonorgestrel)
levobunolol
levocabastine
levocarnitine
Levo-Dromoran # (levorphanol) – see Table 8, p. 40
levodopa
levofloxacin
levonorgestrel
Levora # (ethinyl estradiol/levonorgestrel)
levorphanol – see Table 8, p. 40
Levothroid (levothyroxine)
levothyroxine
Levoxyl (levothyroxine)
Levsin (hyoscyamine)
Levsin PB (hyoscyamine/phenobarbital)
Levsinex Timecaps # (hyoscyamine)
Lexapro (escitalopram) – **PA**; see Table 17, p. 49
Lexxel (enalapril/felodipine) – **PA**; see Table 18, p. 50; see Table 22, p. 54
Lida-Mantle-HC Cream (hydrocortisone/lidocaine)
Lidex # (fluocinonide) – see Table 16, p. 48
lidocaine
lidocaine patch – **PA**
lidocaine/prilocaine
Lidoderm (lidocaine) – **PA**
lindane
linezolid
Lioresal # (baclofen) – see Table 7, p. 39
Lioresal Intrathecal (baclofen) – **PA**; see Table 7, p. 39
liothyronine
liothyronine/thyroxine
Liotrix (liothyronine/thyroxine)
Lipitor (atorvastatin) – see Table 13, p. 45
Liposyn # (fat emulsion, intravenous)
Lipram (amylase/lipase/protease)
lisinopril – see Table 18, p. 50
lisinopril/hydrochlorothiazide – see Table 18, p. 50
lithium
Lithobid (lithium)
Lithostat (acetohydroxamic acid)
liver derivative complex
Livostin (levocabastine)
Lo/Ovral # (ethinyl estradiol/norgestrel)
LoCHOLEST # (cholestyramine)
Locoid (hydrocortisone) – **PA**; see Table 16, p. 48
lodaxamide
Lodine # (etodolac) – see Table 11, p. 43
Lodosyn (carbidopa)
Loestrin # (ethinyl estradiol/norethindrone)
Lomotil # (diphenoxylate/atropine)
lomustine
Lonox # (diphenoxylate/atropine)
loperamide *

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

Table 8, p. 40
Lortab # (hydrocodone/acetaminophen) – see
Table 8, p. 40
losartan – **PA**; see Table 18, p. 50
losartan/hydrochlorothiazide – **PA**; see
Table 18, p. 50
Lotemax (loteprednol)
Lotensin (benazepril) – **PA**; see Table 18, p. 50
loteprednol
Lotrel (amlodipine/benazepril) – **PA**; see
Table 18, p. 50; see Table 22, p. 54
Lotrimin # (clotrimazole)
Lotrisone # (clotrimazole/betamethasone)
Lotronex (alosetron) – **PA**
lovastatin – see Table 13, p. 45
lovastatin extended release – **PA**; see Table 13,
p. 45
lovastatin/niacin – **PA**; see Table 13, p. 45
Lovenox (enoxaparin)
Low-Ogestrel # (ethinyl estradiol/norgestrel)
loxapine
Loxitane # (loxapine)
Lozol # (indapamide)
Lufyllin-GG (dyphylline/guaifenesin)
Lumigan (bimatoprost)
Lunelle (estradiol/medroxyprogesterone)
Lupron (leuprolide) – **PA**; see Table 2, p. 34
Luride # (sodium fluoride)
Luvox # (fluvoxamine) – see Table 17, p. 49
Luxiq (betamethasone) – **PA**; see Table 16,
p. 48

M

Macrobid (nitrofurantoin)
Macrochantin # (nitrofurantoin)

mafenide
magaldrate *
magnesium carbonate/citric acid/gluconolactone
magnesium citrate *
magnesium gluconate *
magnesium hydroxide *
magnesium trisalicylate *
Malarone (atovaquone/proguanil)
Mandelamine (methenamine)
maprotiline – see Table 17, p. 49
Marcaine # (bupivacaine)
Marinol (dronabinol) – **PA**
Marten-tab # (butalbital/acetaminophen)
Matulane (procarbazine)
Mavik (trandolapril) – **PA**; see Table 18, p. 50
Maxair (pirbuterol) – **PA**; see Table 23, p. 55
Maxalt (rizatriptan) – **PA**; see Table 14, p. 46
Maxalt-MLT (rizatriptan) orally disintegrating tablet –
PA; Table 14, p. 46
Maxidex (dexamethasone)
Maxidone (hydrocodone/acetaminophen) – **PA**; see
Table 8, p. 40
Maxipime (cefepime)
Maxitrol # (neomycin/polymyxin B/
dexamethasone)
Maxzide # (triamterene/hydrochlorothiazide)
Mebaral (mephobarbital)
mebendazole
mecamylamine
mechlorethamine
meclizine *
meclofenamate – see Table 11, p. 43
Medrol # (methylprednisolone)
medroxyprogesterone
medroxyprogesterone/estrogen, conjugated
mefenamic acid – **PA**; see Table 11, p. 43
mefloquine
Mefoxin # (cefoxitin)
Megace # (megestrol)
megestrol
Mellaril # (thioridazine)
meloxicam – **PA < 60 years**; see Table 11, p. 43
melphalan
Menest (estrogens, esterified)
meningococcal polysaccharide vaccine
Menomune-A/C/Y/W-135 (meningococcal
polysaccharide vaccine)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Mentax (butenafine)
mepenzolate
meperidine – see Table 8, p. 40
mephobarbital
Mephyton (phytonadione)
meprobamate
meprobamate/aspirin
Mepron (atovaquone)
mercaptopurine
Meridia (sibutramine) – **PA**
meropenem
Merrem (meropenem)
mesalamine
mesna
Mesnex (mesna)
mesoridazine
Mestinon # (pyridostigmine)
Metadate # (methylphenidate)
Metaglip (metformin/glipizide) – **PA**;
see Table 26, p. 58
metaproterenol, inhalation solution – see
Table 23, p. 55
metaproterenol, inhaler – **PA**; see Table 23,
p. 55
metaxalone – see Table 7, p. 39
metformin – see Table 26, p. 58
metformin extended release – see Table 26,
p. 58
metformin/rosiglitazone – **PA**; see Table 26,
p. 58
methadone – see Table 8, p. 40
Methadose # (methadone) – see Table 8, p. 40
methamphetamine – **PA**
methazolamide
methenamine
methenamine/benzoic acid/atropine/
hyoscyamine/methylene blue
methenamine/benzoic acid/atropine/
hyoscyamine/phenyl salicylate/methylene blue
methenamine/benzoic acid/atropine/
hyoscyamine/saldol/methylene blue
methenamine/hyoscyamine/methylene blue
methenamine/sodium acid phosphate
Methergine (methylergonovine)
methimazole
Methitest (methyltestosterone)
methocarbamol – see Table 7, p. 39

methotrexate
methoxsalen
methscopolamine
methsuximide – see Table 20, p. 52
methyclothiazide
methyclothiazide/deserpidine
methyldopa
methyldopa/hydrochlorothiazide
methylergonovine
Methylin # (methylphenidate)
methylphenidate
methylprednisolone
methyltestosterone
methysergide
metipranolol
metoclopramide
metolazone
metoprolol – see Table 21, p. 53
metoprolol /hydrochlorothiazide – see Table 21,
p. 53
Metrocream (metronidazole)
Metrogel (metronidazole)
Metro lotion (metronidazole)
metronidazole
metyrosine
Mevacor # (lovastatin) – see Table 13, p. 45
mexiletine
Mexitol # (mexiletine)
Miacalcin # (calcitonin, salmon)
Micanol (anthralin)
Micardis (telmisartan) – **PA**; see Table 18, p. 50
miconazole *
MICRhoGAM (Rho(D) immune globulin IM micro-
dose) – see Table 1, p. 33
Microgestin Fe # (ethinyl estradiol/
norethindrone)
Micro-K # (potassium chloride)
Micronase # (glyburide) – see Table 26, p. 58
Micronor (norethindrone)
Microzide # (hydrochlorothiazide)
Midamor # (amiloride)
midazolam
midodrine
miglitol – **PA**; see Table 26, p. 58
Migranal (dihydroergotamine)
mineral oil *

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Mini-Gamulin Rh (Rho(D) immune globulin IM micro-dose) – see Table 1, p. 33
Minitran # (nitroglycerin)
Minizide (prazosin/polythiazide) – see Table 19, p. 51
Minocin # (minocycline)
minocycline
minoxidil
Mintezol (thiabendazole)
Miralax (polyethylene glycol-electrolyte solution)
Mirapex (pramipexole)
Mircette # (ethinyl estradiol/desogestrel)
mirtazapine – see Table 17, p. 49
mirtazapine, orally disintegrating tablet – see Table 17, p. 49
misoprostol
mitomycin
mitoxantrone
Moban (molindrone)
Mobic (meloxicam) – **PA < 60 years**; see Table 11, p. 43
modafinil – **PA (effective 07/01/03)**
Modicon # (ethinyl estradiol/norethindrone)
Moduretic # (amiloride/hydrochlorothiazide)
moexipril – **PA**; see Table 18, p. 50
moexipril/hydrochlorothiazide – **PA**; see Table 18, p. 50
molindone
mometasone, ° topical – see Table 16, p. 48
mometasone, nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see Table 25, p. 57
Monarc-M (antihemophilic factor, human)
Monoclate-P (antihemophilic factor, human)
Monodox # (doxycycline)
Monoket # (isosorbide)
Mononine (factor IX, human)
Monopril (fosinopril) – **PA**; see Table 18, p. 50
montelukast – **PA > 16 years**
Monurol (fosfomycin)
moricizine
morphine – see Table 8, p. 40
morphine extended-release – **PA**; see Table 8, p. 40
Motofen (atropine/difenoxin)
Motrin # (ibuprofen *) – see Table 11, p. 43
moxifloxacin

MS Contin # (morphine) – see Table 8, p. 40
MS/L (morphine) – see Table 8, p. 40
MSIR (morphine) – see Table 8, p. 40
MS/S (morphine) – see Table 8, p. 40
Mucomyst # (acetylcysteine)
Mucomyst-10 (acetylcysteine)
multivitamins *
multivitamins/minerals *
mupirocin
Murocoll-2 (scopolamine/phenylephrine)
Muse (alprostadil) – **PA**; see Table 6, p. 38
Mustargen (mechlorethamine)
Myambutol # (ethambutol)
Mycobutin (rifabutin)
Mycogen (nystatin/triamcinolone)
Mycolog II # (nystatin/triamcinolone)
mycophenolate
Mycostatin # (nystatin)
Mydrin (phenylephrine)
Mydracil # (tropicamide)
Myobloc (botulinum toxin type B) – **PA**
Mysoline # (primidone) – see Table 20, p. 52

N

Nabi-HB (hepatitis B immune globulin, human) – see Table 1, p. 33
nabumetone – see Table 11, p. 43
nadolol – see Table 21, p. 53
nadolol/bendroflumethiazide – see Table 21, p. 53
nafarelin
nafcillin
naftifine
Naftin (naftifine)
nalbuphine
Nalfon # (fenoprofen) – see Table 11, p. 43
nalidixic acid
Nallpen (nafcillin)
naloxone
naltrexone
nandrolone
naphazoline
Naprosyn # (naproxen*) – see Table 11, p. 43
naproxen * – see Table 11, p. 43
Naqua (trichlormethiazide)
naratriptan – **PA**; see Table 14, p. 46
Nardil (phenelzine) – see Table 17, p. 49

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Nasacort (triamcinolone), nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**;
see Table 25, p. 57
Nasacort AQ (triamcinolone), nasal spray –
PA > 1 inhaler/month (effective 07/01/03);
see Table 25, p. 57
Nasalide # (flunisolide), nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see
Table 25, p. 57
Nasarel (flunisolide), nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see
Table 25, p. 57
Nasonex (mometasone), nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see
Table 25, p. 57
nateglinide – **PA**; see Table 26, p. 58
Navane # (thiothixene)
Navelbine (vinorelbine)
Nebcin # (tobramycin)
Nebupent (pentamidine)
Necon # (ethinyl estradiol/norethindrone)
nedocromil, inhaler – see Table 23, p. 55
nedocromil ophthalmic
nefazodone – **PA**; see Table 17, p. 49
NegGram # (nalidixic acid)
nelfinavir
Nelova # (ethinyl estradiol/norethindrone)
Nembutal # (pentobarbital)
Neo-Decadron (dexamethasone/neomycin)
neomycin *
neomycin/polymyxin B/dexamethasone
neomycin/polyxmyxin B/gramicidin
neomycin/polymyxin B/hydrocortisone
neomycin/polymyxin B/prednisolone
Neoral (cyclosporine)
Neosar # (cyclophosphamide)
Neosporin Ophthalmic Solution #
(neomycin/polymyxin B/gramicidin)
neostigmine
Neptazane # (methazolamide)
Neulasta (pegfilgrastim) – **PA**; see Table 4,
p. 36
Neumega (oprelvekin) – **PA**; see Table 4, p. 36
Neupogen (filgrastim) – **PA**; see Table 4, p. 36
Neurontin (gabapentin) – **PA > 18 years**; see
Table 20, p. 52
nevirapine

Nexium (esomeprazole) – **PA**; see Table 3, p. 35
niacin *
niacin/lovastatin – **PA**; see Table 13, p. 45
niacinamide *
nicardipine – see Table 22, p. 54
nicotinic acid *
Nifedical (nifedipine) – see Table 22, p. 54
nifedipine – see Table 22, p. 54
Nilandron (nilutamide)
Nilstat # (nystatin)
nilutamide
nimodipine – see Table 22, p. 54
Nimotop (nimodipine) – see Table 22, p. 54
nisoldipine – **PA**; see Table 22, p. 54
nitazoxanide – **PA > 12 years**
nitisinone
Nitrek # (nitroglycerin)
Nitro-Bid # (nitroglycerin)
Nitrodisc (nitroglycerin)
Nitro-Dur # (nitroglycerin)
nitrofurantoin
nitrofurazone
nitroglycerin
Nitrol (nitroglycerin)
Nitrolingual (nitroglycerin)
Nitroquick (nitroglycerin)
Nitrostat # (nitroglycerin)
Nitrotab (nitroglycerin)
Nitro-Time (nitroglycerin)
nizatidine – see Table 3, p. 35
Nizoral # (ketoconazole)
Nolvadex # (tamoxifen)
nonoxynol-9 *
Norco # (hydrocodone/acetaminophen) – see
Table 8, p. 40
Nordette # (ethinyl estradiol/levonorgestrel)
Norditropin (somatropin) – **PA**; see Table 9, p. 41
norethindrone
Norflex # (orphenadrine) – see Table 7, p. 39
norfloxacin
Norgesic # (orphenadrine/aspirin/cafeine) – see
Table 7, p. 39
Norgestimate/ethinyl estradiol
norgestrel
Norinyl # (ethinyl estradiol/norethindrone)
Noritate (metronidazole)
Normodyne # (labetalol) – see Table 21, p. 53

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Noroxin (norfloxacin)
Norpace # (disopyramide)
Norpramin # (desipramine) – see Table 17, p. 49
Nor-Q-D # (norethindrone)
Nortrel (ethinyl estradiol/norethindrone)
nortriptyline – see Table 17, p. 49
Norvasc (amlodipine) – **PA**; see Table 22, p. 54
Norvir (ritonavir)
Novantrone (mitoxantrone) – see Table 5, p. 37
Novoseven (eptacog alfa)
Nulev (hyoscyamine)
NuLyteLy (polyethylene glycol-electrolyte solution)
Numorphan (oxymorphone) – see Table 8, p. 40
Nutropin (somatropin) – **PA**; see Table 9, p. 41
Nutropin AQ (somatropin) – **PA**; see Table 9, p. 41
NuvaRing (etonogestrel/ethinyl estradiol)
nystatin
nystatin/neomycin/triamcinolone/gramicidin
nystatin/triamcinolone

O

octreotide – **PA**
Ocufen # (flurbiprofen)
Ocuflax (ofloxacin)
Ocupress # (carteolol)
Ocusulf-10 # (sulfacetamide)
ofloxacin
Ogen # (estropipate)
Ogestrel # (ethinyl estradiol/norgestrel)
olanzapine – **PA > 20 mg/day (effective 07/01/03)**; see Table 24, p. 56
olmesartan – **PA**; see Table 18, p. 50
olopatadine
olsalazine
Olux (clobetasol) – **PA**; see Table 16, p. 48
omeprazole – **PA**; see Table 3, p. 35
Omnicef (cefdinir)
Omnipen # (ampicillin)
OMS (morphine) – see Table 8, p. 40
ondansetron
Onxol # (paclitaxel)
opium
oprelvekin – **PA**; see Table 4, p. 36
Opticrom # (cromolyn)
Optimine (azatadine) – **PA**; see Table 12, p. 44
Optipranolol # (metipranolol)
Optivar (azelastine)
Oralene # (triamcinolone)
Oramorph SR (morphine) – see Table 8, p. 40
Orap (pimozide)
Orapred (prednisolone)
Orasone (prednisone)
Oretic # (hydrochlorothiazide)
Orfadin (nitisinone)
orlistat – **PA**
orphenadrine – see Table 7, p. 39
orphenadrine/aspirin/caffeine – see Table 7, p. 39
Orphengesic # (orphenadrine/aspirin/caffeine) – see Table 7, p. 39
Ortho-Cept # (ethinyl estradiol/desogestrel)
Ortho-Cyclen (ethinyl estradiol/norgestimate)
Ortho-Dienestrol (dienestrol)
Ortho-Est # (estropipate)
Ortho-Evra (ethinyl estradiol/norelgestromin)
Ortho-Novum # (ethinyl estradiol/norethindrone)
Ortho-Prefest (estradiol/norgestimate)
OrthoTri-Cyclen (ethinyl estradiol/norgestimate)
OrthoTri-Cyclen Lo (ethinyl estradiol/norgestimate)
Orudis # (ketoprofen *) – see Table 11, p. 43
Oruvail # (ketoprofen *) – see Table 11, p. 43
oseltamivir – **PA > 10 capsules/month**
Osmoglyn (glycerin)
Oticaine (benzocaine)
Otocain (benzocaine)
Ovcon (ethinyl estradiol/norethindrone)
Ovide (malathion)
Ovral # (ethinyl estradiol/norgestrel)
Ovrette (norgestrel)
oxacillin
oxaliplatin
Oxandrin (oxandrolone)
oxandrolone
oxaprozin – see Table 11, p. 43
oxazepam
oxcarbazepine – see Table 20, p. 52
oxiconazole
Oxistat (oxiconazole)
Oxsoralen (methoxsalen)
Oxsoralen-Ultra (methoxsalen)
oxybutinin

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

oxybutynin patch – **PA**
oxycodone – see Table 8, p. 40
oxycodone controlled release – **PA > 90 tablets/month; PA > 240 mg/day**;
see Table 8, p. 40
oxycodone/acetaminophen – see Table 8, p. 40
oxycodone/aspirin – see Table 8, p. 40
OxyContin (oxycodone controlled release) –
PA > 90 tablets/month; PA > 240 mg/day;
see Table 8, p. 40
Oxydose (oxycodone) – see Table 8, p. 40
OxyFast (oxycodone) – see Table 8, p. 40
Oxy IR (oxycodone) – see Table 8, p. 40
oxymetholone
oxymorphone
oxytetracycline/polymyxin B
oxytocin
Oxytrol (oxybutynin) patch – **PA**

P

P2E1 (pilocarpine/epinephrine)
Pacerone # (amiodarone)
paclitaxel
palivizumab – **PA**
Pamelor # (nortriptyline) – see Table 17, p. 49
pamidronate
Pamine (methscopolamine)
Panafil (papain/urea/chlorophyllin/copper complex)
Pancrease (amylase/lipase/protease)
Pancrecarb (amylase/lipase/protease)
Pancrelipase (amylase/lipase/protease)
Pancron (amylase/lipase/protease)
Pandel (hydrocortisone) – **PA**; see Table 16, p. 48
Pangestyme (amylase/lipase/protease)
Panglobulin (immune globulin IV, human) – **PA**;
see Table 1, p. 33
Panokase (amylase/lipase/protease)
Panretin (alitretinoin) – **PA**; see Table 10, p. 42
pantoprazole – see Table 3, p. 35
papain/urea
papain/urea/chlorophyllin
papain/urea/chlorophyllin/copper complex
papaverine

Parafon Forte DSC # (chlorzoxazone) – see Table 7, p. 39
Paragard (copper IUD)
Paraplatin (carboplatin)
paregoric
paricalcitol
Parlodel # (bromocriptine)
Parnate (tranylcypromine) – see Table 17, p. 49
paromomycin
paroxetine – **PA**; see Table 17, p. 49
Patanol (olopantadine)
Paxil (paroxetine) – **PA**; see Table 17, p. 49
PBZ # (tripelennamine) – see Table 12, p. 44
PCE Dispertab (erythromycin)
Pediapred # (prednisolone)
pediatric multivitamins *
Pedi-Dri (nystatin)
Pediolic # (neomycin/polymyxin B/hydrocortisone)
Peganone (ethotoin) – see Table 20, p. 52
Pegasys (peginterferon alfa-2a) – see Table 5, p. 37
pegfilgrastim – **PA**; see Table 4, p. 36
peginterferon alfa-2a – see Table 5, p. 37
peginterferon alfa-2b – see Table 5, p. 37
PEG-Intron (peginterferon alfa-2b) – see Table 5, p. 37
Pemadd # (pemoline)
pemirolast
pemoline
penbutolol – **PA**; see Table 21, p. 53
penciclovir
penicillamine
penicillin G
penicillin V
Penlac (ciclopirox)
pentamidine
Pentasa (mesalamine)
pentazocine
pentazocine/acetaminophen
pentazocine/naloxone
pentosan
pentoxifylline
Pentoxil # (pentoxifylline)
Pepcid # (famotidine *) – see Table 3, p. 35
P-Ephrine (phenylephrine)
Percocet (oxycodone/acetaminophen) – **PA**; see Table 8, p. 40

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Percodan # (oxycodone/aspirin) – see Table 8, p. 40
pergolide
Periactin # (cyproheptadine) – see Table 12, p. 44
perindopril – **PA**; see Table 18, p. 50
Periostat (doxycycline)
Permapen (penicillin G)
Permax # (pergolide)
permethrin *
perphenazine
petrolatum *
Pfizerpen # (penicillin G)
Pharmaflur (sodium fluoride)
phenazopyridine
phenelzine – see Table 17, p. 49
Phenergan # (promethazine) – see Table 12, p. 44
phenobarbital – see Table 20, p. 52
phentolamine
phenylephrine
phenyltoloxamine/pyrilamine/pheniramine/pseudoephedrine – see Table 12, p. 44
Phenytek (phenytoin) – see Table 20, p. 52
phenytoin – see Table 20, p. 52
Phisohex (hexachlorophene)
Phos-Flur (sodium fluoride)
Phoslo (calcium acetate)
Phospholine Iodide (echothiophate)
Phrenilin # (butalbital/acetaminophen)
phytonadione
Pilocar # (pilocarpine)
pilocarpine
pilocarpine/epinephrine
Pilopine (pilocarpine)
Piloptic (pilocarpine)
pimecrolimus
pimozide
pindolol – see Table 21, p. 53
pioglitazone – see Table 26, p. 58
piperacillin/tazobactam
pirbuterol – **PA**; see Table 23, p. 55
piroxicam – see Table 11, p. 43
Plan B (levonorgestrel)
Plaquenil # (hydroxychloroquine)
Platinol-AQ # (cisplatin)
Plavix (clopidogrel)

Plendil (felodipine) – **PA**; see Table 22, p. 54
Pletal (cilostazol)
Plexion (sulfacetamide/sulfur)
pneumococcal vaccine
Pneumovax (pneumococcal vaccine)
Pnu-Imune # (pneumococcal vaccine)
podofilox
Polaramine # (dexchlorpheniramine) – see Table 12, p. 44
Polycitra (citric acid/sodium citrate/potassium citrate)
Polycitra-K (citric acid/potassium citrate)
Polycitra-LC (citric acid/sodium citrate/potassium citrate)
polyethylene glycol-electrolyte solution
Polygam S/D (immune globulin IV, human) – **PA**; see Table 1, p. 33
polymyxin B
Poly-Pred (neomycin/polymyxin B/prednisolone)
polythiazide
Polytrim # (trimethoprim/polymyxin B)
Ponstel (mefenamic acid) – **PA**; see Table 11, p. 43
Portia (levonorgestrel/ethinyl estradiol)
potassium bicarbonate
potassium chloride/potassium bicarbonate
potassium chloride/sodium chloride/sodium bicarbonate
potassium citrate
potassium citrate/citric acid
potassium citrate/sodium citrate/citric acid
potassium iodide
potassium phosphate
potassium phosphate/dibasic sodium phosphate/monobasic sodium phosphate
potassium phosphate/sodium phosphate
potassium phosphate/sodium phosphate/phosphorus
povidone *
pramipexole
Pramosone # (pramoxine/hydrocortisone)
pramoxine/hydrocortisone
Prandin (repaglinide) – **PA**; see Table 26, p. 58
Pravachol (pravastatin) – **PA**; see Table 13, p. 45
pravastatin – **PA**; see Table 13, p. 45
prazosin – see Table 19, p. 51
prazosin/polythiazide – see Table 19, p. 51
Precose (acarbose) – **PA**; see Table 26, p. 58

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Pred-Forte # (prednisolone)
 Pred-G (prednisolone/gentamicin)
 prednicarbate – **PA**; see Table 16, p. 48
 prednisolone
 prednisolone/gentamicin
 prednisone
 Prelone # (prednisolone)
 Premarin (estrogens, conjugated)
 Premphase (medroxyprogesterone/estrogens, conjugated)
 Prempro (medroxyprogesterone/estrogens, conjugated)
 prenatal vitamins *
 Prevacid (lansoprazole) capsules – **PA > 16 years**; see Table 3, p. 35
 Prevacid (lansoprazole) suspension – **PA > 16 years (except for LTC members)**; see Table 3, p. 35
 Prevalite # (cholestyramine)
 Preven (ethinyl estradiol/levonorgestrel)
 Prevident (sodium fluoride)
 Prevpac (lansoprazole/amoxicillin/clarithromycin)
 Prilosec (omeprazole) – **PA**; see Table 3, p. 35
 primaquine
 Primaxin (imipenem/cilastatin)
 primidone – see Table 20, p. 52
 Primsol (trimethoprim)
 Principen # (ampicillin)
 Prinivil # (lisinopril) – see Table 18, p. 50
 Prinzide # (lisinopril/hydrochlorothiazide) – see Table 18, p. 50
 Proamatine (midodrine)
 probenecid
 probenecid/colchicine
 procainamide
 Procanbid (procainamide)
 procarbazine
 Procardia # (nifedipine) – see Table 22, p. 54
 prochlorperazine
 Procrit (epoetin alfa) – **PA**; see Table 4, p. 36
 Proctocort # (hydrocortisone)
 Proctocream-HC # (pramoxine/hydrocortisone)
 Proctofoam-HC (pramoxine/hydrocortisone)
 Procto-Kit # (hydrocortisone)
 Proctozone-HC # (hydrocortisone)
 procyclidine
 Profilnine SD (factor IX complex)
 progesterone
 Proglycem (diazoxide)
 Prograf (tacrolimus)
 Prolixin # (fluphenazine)
 Proloprim # (trimethoprim)
 promethazine – see Table 12, p. 44
 promethazine/phenylephrine – see Table 12, p. 44
 Promethegan (promethazine)
 Prometrium (progesterone)
 Pronestyl # (procainamide)
 propafenone
 propantheline
 Propine # (dipivefrin)
 Proplex T (factor IX complex)
 propoxyphene – see Table 8, p. 40
 propoxyphene napsylate – see Table 8, p. 40
 propoxyphene napsylate/acetaminophen – see Table 8, p. 40
 propranolol – see Table 21, p. 53
 propranolol/hydrochlorothiazide – see Table 21, p. 53
 propylthiouracil
 Proscar (finasteride) – **PA**
 Prosed/DS (methenamine/benzoic acid/atropine/hyoscyamine/saldol/methylene blue)
 ProSom # (estazolam) – **PA > 10 units/month**; see Table 15, p. 47
 Prostigmin (neostigmine)
 Protonix (pantoprazole) – see Table 3, p. 35
 Protopic (tacrolimus)
 protriptyline – see Table 17, p. 49
 Protropin (somatrem) – **PA**; see Table 9, p. 41
 Proventil #
 Proventil, inhaler (albuterol) – **PA**; see Table 23, p. 55
 Proventil HFA, inhaler (albuterol) – **PA**; see Table 23, p. 55
 Provera # (medroxyprogesterone)
 Provigil (modafinil) – **PA (effective 07/01/03)**
 Prozac # (fluoxetine) – see Table 17, p. 49
 Prozac Weekly (fluoxetine) – **PA**; see Table 17, p. 49
 Prudoxin (doxepin)
 pseudoephedrine *
 Psorcon # (diflorasone) – see Table 16, p. 48

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

psyllium *
Pulmicort (budesonide), inhalation suspension – see Table 23, p. 55
Pulmicort (budesonide), inhaler – see Table 23, p. 55
Pulmozyme (dornase alpha)
Purinethol (mercaptopurine)
pyrazinamide
Pyridium (phenazopyridine)
pyridostigmine bromide
pyridoxine *
pyrilamine/phenylephrine – see Table 12, p. 44
pyrimethamine

Q

quazepam – **PA**; see Table 15, p. 47
Questran # (cholestyramine)
quetiapine – **PA < 200 mg/day for more than 60 days or > 800 mg/day (effective 07/01/03)**; see Table 24, p. 56
Quibron (theophylline/guafenesin)
Quibron-T/SR (theophylline)
quinacrine
Quinaglute # (quinidine)
quinapril – **PA**; see Table 18, p. 50
quinapril/hydrochlorothiazide – **PA**; see Table 18, p. 50
Quinidex # (quinidine)
quinidine
quinine
Quixin (levofloxacin)
Qvar (beclomethasone), inhaler – see Table 23, p. 55

R

Rabavert (rabies vaccine)
rabeprazole – **PA**; see Table 3, p. 35
rabies immune globulin IM, human – see Table 1, p. 33
rabies vaccine
Radiacare (oxybenzone/pedimate)
raloxifene
ramipril – **PA**; see Table 18, p. 50
ranitidine * – see Table 3, p. 35
Rapamune (sirolimus)
rasburicase

Rebetol (ribavirin)
Rebetron (interferon alfa-2b/ribavirin) – see Table 5, p. 37
Rebif (interferon beta-1a) – see Table 5, p. 37
Recombinate (antihemophilic factor, recombinant)
Recombivax HB (hepatitis B, recombinant vaccine)
Refacto (antihemophilic factor, recombinant)
Refludan (lepirudin) – **PA**
Regitine (phentolamine)
Reglan # (metoclopramide)
Regranex (becaplermin)
Relafen # (nabumetone) – see Table 11, p. 43
Relenza (zanamivir) – **PA > 20 units/month**
Relpax (eletriptan) – **PA**; see Table 14, p. 46
Remeron # (mirtazapine) – see Table 17, p. 49
Remeron Sol Tab (mirtazapine, orally disintegrating tablets) – see Table 17, p. 49
Remicade (infliximab) – **PA**; see Table 5, p. 37
Reminyl (galantamine)
Remular-S # (chlorzoxazone)
Renacidin (magnesium carbonate/citric acid/gluconolactone)
Renagel (sevelamer)
Renese (polythiazide)
repaglinide – **PA**; see Table 26, p. 58
Repan # (butalbital/acetaminophen/caffeine)
Repan-CF # (butalbital/acetaminophen)
Requip (ropinirole)
Rescriptor (delavirdine)
Rescula (unoprostone)
reserpine
RespiGam (respiratory syncytial virus immune globulin IV) – **PA**; see Table 1, p. 33
respiratory syncytial virus immune globulin IV – **PA**; see Table 1, p. 33
Restoril # (temazepam) – **PA > 10 units/month**; see Table 15, p. 47
Retin-A # (tretinoin) – **PA > 25 years**; see Table 10, p. 42
Retinol *
Retrovir (zidovudine)
Revia # (naltrexone)
Rheumatrex # (methotrexate)
Rhincort Aqua (budesonide), nasal spray – **PA > 1 inhaler/2 months (effective 07/01/03)**; see Table 25, p. 57
Rho(D) immune globulin IM – see Table 1, p. 33

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Rho(D) immune globulin IM micro-dose – see Table 1, p. 33
Rho(D) immune globulin IV, human – see Table 1, p. 33
RhoGAM (Rho(D) immune globulin IM) – see Table 1, p. 33
ribavirin
riboflavin *
Ridaura (auranofin)
rifabutin
Rifadin # (rifampin)
Rifamate (rifampin/isoniazid)
rifampin
rifampin/isoniazid
Rilutek (riluzole)
riluzole
Rimactane # (rifampin)
rimantadine
rimexolone
risedronate
Risperdal (risperidone) – **PA > 6 mg/day (effective 07/01/03)**; see Table 24, p. 56
risperidone – **PA > 6 mg/day (effective 07/01/03)**; see Table 24, p. 56
Ritalin # (methylphenidate)
ritonavir
ritonavir/lopinavir
Rituxan (rituximab)
rituximab
rivastigmine
rizatriptan – **PA**; see Table 14, p. 46
rizatriptan, orally disintegrating tablets – **PA**; see Table 14, p. 46
RMS (morphine) – see Table 8, p. 40
Robaxin # (methocarbamol) – see Table 7, p. 39
Robinul # (glycopyrrolate)
Rocaltrol # (calcitriol)
Rocephin (ceftriaxone)
rofecoxib – **PA < 60 years**; see Table 11, p. 43
Roferon-A (interferon alfa-2a) – see Table 5, p. 37
ropinirole
rosiglitazone – see Table 26, p. 58
rosiglitazone/metformin – **PA**
Rowasa (mesalamine)
Roxanol (morphine) – see Table 8, p. 40
Roxanol-T (morphine) – see Table 8, p. 40

Roxicet (oxycodone/acetaminophen) – see Table 8, p. 40
Roxicodone (oxycodone) – see Table 8, p. 40
Roxiprin (oxycodone/aspirin) – see Table 8, p. 40
Rx-Otic (antipyrine/benzocaine)
Rythmol # (propafenone)

S

Saizen (somatropin) – **PA**; see Table 9, p. 41
Salagen (pilocarpine)
salicylic acid/sulfur colloidal
salmeterol – see Table 23, p. 55
salsalate
Sal-Tropine (atropine)
Sandimmune # (cyclosporine)
Sandoglobulin (immune globulin IV, human) – **PA**; see Table 1, p. 33
Sandostatin (octreotide) – **PA**
Sansert (methysergide)
Santyl (collagenase)
saquinavir
Sarafem (fluoxetine) – **PA**; see Table 17, p. 49
sargramostim – **PA**; see Table 4, p. 36
scopolamine
scopolamine/phenylephrine
secobarbital
secobarbital/amobarbital
Seconal # (secobarbital)
Sectral # (acebutolol) – see Table 21, p. 53
selegiline
selenium sulfide *
Semprex-D (acrivastine/pseudoephedrine) – **PA**; see Table 12, p. 44
senna *
Sensorcaine # (bupivacaine)
Septisol (hexachlorophene)
Septra # (trimethoprim/sulfamethoxazole)
Serax # (oxazepam)
Serentil (mesoridazine)
Serevent (salmeterol) – see Table 23, p. 55
Seroquel (quetiapine) – **PA < 200 mg/day for more than 60 days or > 800 mg/day (effective 07/01/03)**; see Table 24, p. 56
Serostim (somatropin) – **PA**; see Table 9, p. 41
sertraline – **PA**; see Table 17, p. 49
Serzone (nefazodone) – **PA**; see Table 17, p. 49

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

sevelamer
Shohl's Solution (sodium citrate/citric acid)
sibutramine – **PA**
Sildec (carbinoxamine/pseudoephedrine)
sildenafil – **PA**; see Table 6, p. 38
Silvadene # (silver sulfadiazine)
silver sulfadiazine
simethicone *
simvastatin – **PA**; see Table 13, p. 45
Sinemet # (carbidopa/levodopa)
Sinequan # (doxepin) – see Table 17, p. 49
Singulair (montelukast) – **PA > 16 years**
sirolimus
Skelaxin (metaxalone) – see Table 7, p. 39
Skelid (tiludronate)
Slo-Bid # (theophylline)
Slo-Phyllin (theophylline)
sodium bicarbonate *
sodium chloride solution for inhalation *
sodium citrate/citric acid
sodium ferric gluconate complex
sodium fluoride
sodium phenylbutyrate
sodium phosphate
sodium polystyrene sulfonate
Solaraze (diclofenac)
Solganal (aurothioglucose)
Solu-Cortef # (hydrocortisone)
Solu-Medrol # (methylprednisolone)
Soma # (carisoprodol) – see Table 7, p. 39
somatrem – **PA**; see Table 9, p. 41
somatropin – **PA**; see Table 9, p. 41
Somnote (chloral hydrate)
Sonata (zaleplon) – **PA > 10 units/month**; see Table 15, p. 47
Sorbitrate # (isosorbide)
Soriatane (acitretin) – see Table 10, p. 42
sotalol – see Table 21, p. 53
Spectazole (econazole)
Spectracef (cefditoren)
spironolactone
spironolactone/hydrochlorothiazide
Sporanox (itraconazole)
SPS # (sodium polystyrene sulfonate)
SSKI (potassium iodide)
Stadol, injection # (butorphanol)
Stadol, nasal spray (butorphanol) – **PA**
stanazolol
Starlix (nateglinide) – **PA**; see Table 26, p. 58
Stelazine # (trifluoperazine)
Stimate (desmopressin)
Stromectol (ivermectin)
succimer
sucralfate
Sular (nisoldipine) – **PA**; see Table 22, p. 54
sulconazole
sulfacetamide
sulfacetamide/prednisolone
sulfacetamide/sulfur
Sulfacet-R (sulfacetamide/sulfur)
sulfadiazine
Sulfamide (sulfacetamide)
Sulfamylon (mafenide)
sulfanilamide
sulfasalazine
Sulfatrim # (trimethoprim/sulfamethoxazole)
Sulfazine # (sulfasalazine)
sulfinpyrazone
sulfisoxazole
Sulfoxyl (benzoyl peroxide/sulfur)
sulindac – see Table 11, p. 43
sumatriptan – **PA**; see Table 14, p. 46
sumatriptan, injection – **PA > six units/month**; see Table 14, p. 46
Sumycin # (tetracycline)
Suprax (cefixime)
Surmontil (trimipramine) – see Table 17, p. 49
Sustiva (efavirenz)
Symmetrel # (amantadine)
Synagis (palivizumab) – **PA**
Synalar # (fluocinolone) – see Table 16, p. 48
Synalgos-DC (dihydrocodeine/aspirin/cafeine)
Synarel (nafarelin)
Synthroid (levothyroxine)
Synvisc (hylan polymers) – **PA**
Syprine (trientine)

I
tacrine
tacrolimus
Tagamet # (cimetidine*) – see Table 3, p. 35
Talacen # (pentazocine/acetaminophen)
Talwin (pentazocine)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug's formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Tambocor (flecainide)
Tamiflu (oseltamivir) – **PA > 10 capsules/month**
tamoxifen
tamsulosin – **PA**; see Table 19, p. 51
TAO (troleandomycin)
Tapazole # (methimazole)
Targretin (bexarotene)
Tarka (trandolapril/verapamil) – **PA**; see Table 18, p. 50; see Table 22, p. 54
Tasmar (tolcapone)
Tavist # (clemastine) – see Table 12, p. 44
Taxol # (paclitaxel)
Taxotere (docetaxel)
tazarotene – **PA > 25 years**; see Table 10, p. 42
Tazicef # (ceftazidime)
Tazidime # (ceftazidime)
Tazorac (tazarotene) – **PA > 25 years**; see Table 10, p. 42
TBC # (trypsin/balsam peru/castor oil)
tegaserod – **PA**
Tegison (etretinate) – see Table 10, p. 42
Tegretol # (carbamazepine) – see Table 20, p. 52
telmisartan – **PA**; see Table 18, p. 50
temazepam – **PA > 10 units/month**; see Table 15, p. 47
Temodar (temozolomide)
Temovate # (clobetasol) – see Table 16, p. 48
temozolomide
Tenex # (guanfacine)
tenofovir
Tenoretic # (atenolol/chlorthalidone) – see Table 21, p. 53
Tenormin # (atenolol) – see Table 21, p. 53
Tequin (gatifloxacin)
Terak (oxytetracycline/polymyxin B)
Terazol (terconazole)
terazosin – see Table 19, p. 51
terbinafine
terbutaline
terconazole
teriparatide – **PA**
Teslac (testolactone)
Tessalon # (benzonatate)
Testoderm (testosterone)
testolactone
testosterone
Testred (methyltestosterone)
tetanus immune globulin IM, human – see Table 1, p. 33
tetracycline
Teveten (eprosartan) – **PA**; see Table 18, p. 50
Texacort # (hydrocortisone) – see Table 16, p. 48
thalidomide – see Table 5, p. 37
Thalitone (chlorthalidone)
Thalomid (thalidomide) – see Table 5, p. 37
Theo-24 (theophylline)
Theochron # (theophylline)
Theo-Dur # (theophylline)
Theolair (theophylline)
Theolair-SR # (theophylline)
Theolate (theophylline/guaifenesin)
theophylline
theophylline/guaifenesin
theophylline/potassium iodide
Thera-Flur-N (sodium fluoride)
Thermazene # (silver sulfadiazine)
thiabendazole
thiamine *
thiethylperazine
thioguanine
Thiola (tiopronin)
thioridazine
thiothixene
Thorazine # (chlorpromazine)
Thymoglobulin (antithymocyte globulin, rabbit) – see Table 1, p. 33
thyroid
Thyrolar (liotrix)
Thyrox (levothyroxine)
tiagabine – **PA > 18 years**; see Table 20, p. 52
Tiazac (diltiazem) – see Table 22, p. 54
ticarcillin/clavulanate
TICE BCG (BCG vaccine)
Ticlid # (ticlopidine)
ticlopidine
Tigan # (trimethobenzamide)
Tikosyn (dofetilide)
Tilade (nedocromil) – see Table 23, p. 55
tiludronate
Timentin (ticarcillin/clavulanate)
Timolide (timolol/hydrochlorothiazide) – see Table 21, p. 53

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

timolol – see Table 21, p. 53
timolol/hydrochlorothiazide – see Table 21, p. 53
Timoptic # (timolol)
tiopronin
tizanidine – see Table 7, p. 39
TOBI (tobramycin/sodium chloride)
TobraDex (tobramycin/dexamethasone)
tobramycin
tobramycin/dexamethasone
tobramycin/sodium chloride
Tobrex # (tobramycin)
tocainide
Tofranil # (imipramine) – see Table 17, p. 49
tolazamide – see Table 26, p. 58
tolbutamide – see Table 26, p. 58
tolcapone
Tolectin # (tolmetin) – see Table 11, p. 43
Tolinase # (tolazamide) – see Table 26, p. 58
tolmetin – see Table 11, p. 43
tolnaftate *
tolterodine
Tonocard (tocainide)
Topamax (topiramate) – **PA > 18 years**; see Table 20, p. 52
Topicort # (desoximetasone) – see Table 16, p. 48
Topicort LP # (desoximetasone) – see Table 16, p. 48
topiramate – **PA > 18 years**; see Table 20, p. 52
Toprol (metoprolol) – see Table 21, p. 53
Toradol # (ketorolac) – see Table 11, p. 43
Torecan (thiethylperazine)
toremifene
torsemide
T-Phyl (theophylline)
Tracleer (bosentan) – **PA**
tramadol
tramadol/acetaminophen – **PA**
Trandate # (labetalol) – see Table 21, p. 53
trandolapril – **PA**; see Table 18, p. 50
trandolapril/verapamil – **PA**; see Table 18, p. 50; see Table 22, p. 54
Transderm-Nitro (nitroglycerin)
Transderm-Scop (scopolamine)
Tranxene T # (clorazepate) – see Table 20, p. 52
tranylcypromine – see Table 17, p. 49
trastuzumab
Travasol (amino acid & electrolyte IV infusion)
Travatan (travoprost)
travoprost
trazodone – see Table 17, p. 49
Trelstar (triptorelin) – **PA**; see Table 2, p. 34
Trental # (pentoxifylline)
tretinoin – **PA > 25 years**; see Table 10, p. 42
Trexall (methotrexate)
triamcinolone, inhaler – see Table 23, p. 55
triamcinolone, nasal spray – **PA > 1 inhaler/month (effective 07/01/03)**; see Table 25, p. 57
triamcinolone, oral
triamcinolone, topical – see Table 16, p. 48
triamterene/hydrochlorothiazide
triazolam – **PA > 10 units/month**; see Table 15, p. 47
Tri-Chlor (trichloroacetic acid)
trichlormethiazide
trichloroacetic acid
Tricor # (fenofibrate)
Tricosal (choline salicylate/magnesium salicylate)
trientine
triethanolamine
trifluoperazine
trifluridine
trihexyphenidyl
Trilafon # (perphenazine)
Trileptal (oxcarbazepine) – see Table 20, p. 52
Tri-Levlen # (ethinyl estradiol/levonorgestrel)
Trilisate (choline salicylate/magnesium salicylate)
trimethobenzamide
trimethoprim
trimethoprim/polymyxin B
trimethoprim/sulfamethoxazole
trimipramine – see Table 17, p. 49
Trimox # (amoxicillin)
Trinalin Repetabs (azatadine/pseudoephedrine) – **PA**; see Table 12, p. 44
Tri-Norinyl (ethinyl estradiol/norethindrone)
tripelennamine – see Table 12, p. 44
Triphasil # (ethinyl estradiol/levonorgestrel)
triprolidine/pseudoephedrine
triptorelin – **PA**; see Table 2, p. 34
Tri-Staton II (nystatin/triamcinolone)
Trivora # (ethinyl estradiol/levonorgestrel)
Trizivir (abacavir/lamivudine/zidovudine)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

troleandomycin
tropicamide
Trusopt (dorzolamide)
trypsin/balsam peru/castor oil
Tuinal (secobarbital/amobarbital)
Twinrix (hepatitis A, inactivated/hepatitis B, recombinant vaccine)
Tylenol/codeine # (codeine/acetaminophen) – see Table 8, p. 40
Tylox # (oxycodone/acetaminophen) – see Table 8, p. 40
Typhim Vi (typhoid vaccine)
typhoid vaccine

U

Ultracet (tramadol/acetaminophen) – **PA**
Ultram # (tramadol)
Ultrase (amylase/lipase/protease)
Ultravate (halobetasol) – **PA**; see Table 16, p. 48
Unasyn (ampicillin/sulbactam)
Uni-Dur (theophylline)
Uniphyll (theophylline)
Uniretic (moexipril/hydrochlorothiazide) – **PA**; see Table 18, p. 50
Unithroid (levothyroxine)
Univasc (moexipril) – **PA**; see Table 18, p. 50
unoprostone
urea
urea/sodium propionate/methionine/cystine/inositol
Urecholine (bethanechol)
Urex # (methenamine)
Urimax (methenamine/hyoscyamine/methylene blue)
Urised (methenamine/benzoic acid/atropine/hyoscyamine/methylene blue)
Urispas (flavoxate)
Urocit-K (potassium citrate)
Uroquid-Acid No. 2 (methenamine/sodium biphosphate)
URSO (ursodiol)
ursodiol
Usept (methenamine/benzoic acid/atropine/hyoscyamine/phenylsalicylate/methylene blue)

V

Vagifem (estradiol)
valacyclovir
Valcyte (valganciclovir)
valdecoxib – **PA < 60 years**; see Table 11, p. 43
valganciclovir
Valisone # (betamethasone) – see Table 16, p. 48
valproate – see Table 20, p. 52
valproic acid – see Table 20, p. 52
valsartan – **PA**; see Table 18, p. 50
valsartan/hydrochlorothiazide – **PA**; see Table 18, p. 50
Valtrex (valacyclovir)
Vanceril (beclomethasone), inhaler – see Table 23, p. 55
Vancocin # (vancomycin)
Vancoled # (vancomycin)
vancomycin
Vanoxide-HC (benzoyl peroxide/hydrocortisone)
Vantin (cefpodoxime)
varicella-zoster immune globulin IM, human – see Table 1, p. 33
Vascor (bepridil) – **PA**; see Table 22, p. 54
Vaseretic # (enalapril/hydrochlorothiazide) – see Table 18, p. 50
Vasocidin # (sulfacetamide/prednisolone)
vasopressin
Vasotec # (enalapril) – see Table 18, p. 50
Veetids # (penicillin V)
venlafaxine – **PA**; see Table 17, p. 49
Venofer (iron sucrose)
Venoglobulin-I (immune globulin IV, human) – **PA**; see Table 1, p. 33
Venoglobulin-S (immune globulin IV, human) – **PA**; see Table 1, p. 33
Ventolin #
Ventolin, inhaler (albuterol) – **PA**; see Table 23, p. 55
Ventolin HFA, inhaler (albuterol) – **PA**; see Table 23, p. 55
Vepesid # (etoposide)
verapamil – see Table 22, p. 54
Verelan # (verapamil) – see Table 22, p. 54
Vermox # (mebendazole)
Versed # (midazolam)
verteporfin

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

vitamins, multiple/minerals *
vitamins, pediatric *
vitamins, prenatal *
Vivactil # (protriptyline) – see Table 17, p. 49
Vivelle # (estradiol)
Vivelle-Dot (estradiol)
Vivotif Berna Vaccine (typhoid vaccine)
Volmax (albuterol)
Voltaren # (diclofenac) – see Table 11, p. 43
Vosol # (acetic acid)
Vytone (iodoquinol/hydrocortisone)

W

warfarin
water for inhalation *
Welchol (colesevelam)
Wellbutrin # (bupropion) – see Table 17, p. 49
Wellbutrin SR (bupropion sustained release) – see Table 17, p. 49
Westcort # (hydrocortisone) – see Table 16, p. 48
WinRho SDF (Rho(D) immune globulin IV, human) – see Table 1, p. 33
Winstrol (stanozolol)
witch hazel *
Wycillin (penicillin G)

X

Xalatan (latanoprost)
Xanax # (alprazolam)
Xeloda (capecitabine)
Xenical (orlistat) – **PA**
Xerac AC (aluminum chloride)
Xopenex (levalbuterol), inhalation solution – **PA**; see Table 23, p. 55
Xylocaine # (lidocaine)
Xylocaine-MPF # (lidocaine)

Y

Yasmin (ethinyl estradiol/drospirenone)

Z

Zaditor (ketotifen)
zafirlukast – **PA > 16 years**
zalcitabine
zaleplon – **PA > 10 units/month**; see Table 15, p. 47
Zanaflex # (tizanidine) – see Table 7, p. 39
zanamivir – **PA > 20 units/month**
Zantac # (ranitidine *) – see Table 3, p. 35
Zarontin # (ethosuximide) – see Table 20, p. 52
Zaroxolyn (metolazone)
Zebeta # (bisoprolol) – see Table 21, p. 53
Zebutal (butalbital/acetaminophen/cafeine)
Zelnorm (tegaserod) – **PA**
Zemplar (paricalcitol)
Zerit (stavudine)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Alphabetic List (cont.)

Zestoretic # (lisinopril/hydrochlorothiazide) – see Table 18, p. 50
Zestril # (lisinopril) – see Table 18, p. 50
Zetia (ezetimibe) – **PA**
Ziac # (bisoprolol/hydrochlorothiazide) – see Table 21, p. 53
Ziagen (abacavir)
zidovudine
zileuton – **PA > 16 years**
Zinacef # (cefuroxime)
zinc oxide *
zinc sulfate
Zincate (zinc sulfate)
Ziox (papain/urea/chlorophyllin)
ziprasidone – **PA > 160 mg/day (effective 07/01/03)**; see Table 24, p. 56
Zithromax (azithromycin)
Zocor (simvastatin) – **PA**; see Table 13, p. 45
Zocort HC (chloroxylenol/pramoxine/hydrocortisone)
Zofran (ondansetron)
Zoladex (goserelin) – **PA**; see Table 2, p. 34
zoledronic acid
zolmitriptan – **PA > six units/month**; see Table 14, p. 46
zolmitriptan, orally disintegrating tablets – **PA > six units/month**; see Table 14, p. 46
Zoloft (sertraline) – **PA**; see Table 17, p. 49
zolpidem – **PA > 10 units/month**; see Table 15, p. 47
Zometa (zoledronic acid)
Zomig (zolmitriptan) – **PA > six units/month**; see Table 14, p. 46
Zomig-ZMT (zolmitriptan, orally disintegrating tablets) – **PA > six units/month**; see Table 14, p. 46
Zonalon (doxepin)
Zone-A Forte (pramoxine/hydrocortisone)
Zonegran (zonisamide) – see Table 20, p. 52
zonisamide – see Table 20, p. 52
Zosyn (piperacillin/tazobactam)
Zoto-HC (chloroxylenol/pramoxine/hydrocortisone)
Zovia # (ethinyl estradiol/ethynodiol)
Zovirax # (acyclovir)
Zydone (hydrocodone/acetaminophen) – **PA**; see Table 8, p. 40

Zyflo (zileuton) – **PA > 16 years**
Zyloprim # (allopurinol)
Zyprexa (olanzapine) – **PA > 20 mg/day (effective 07/01/03)**; see Table 24, p. 56
Zyrtec (cetirizine) syrup – **PA > 12 years (except for LTC members)**; see Table 12, p. 44
Zyrtec (cetirizine) tablets – **PA (effective 07/01/03)**; see Table 12, p. 44
Zyrtec-D (cetirizine/pseudoephedrine) – **PA (effective 07/01/03)**; see Table 12, p. 44
Zyvox (linezolid)

PA Prior authorization is required. The prescriber must obtain prior authorization for the drug in order for the pharmacy to receive payment.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

° Prior-authorization status depends on the drug’s formulation.

Note: Any drug that does not appear on the List requires prior authorization.

Therapeutic Class Tables

Table 1 – Immune Globulins

Drug Name	PA Status	Clinical Notes
cytomegalovirus immune globulin IV, human (CMV-IGIV) – CytoGam		<p><i>Rate and Route of Administration:</i></p> <ul style="list-style-type: none"> Administer only at rate, route, and concentration indicated for product; too rapid IV administration rate may lead to a precipitous drop in blood pressure, fluid overload, and a possible thrombotic event. Cautious use in patients with history of cardiovascular disease or thrombotic episodes. <p><i>Renal Risk:</i></p> <ul style="list-style-type: none"> IGIV (human) products have been associated with renal dysfunction, acute renal failure, and osmotic nephrosis. Risk factors include age > 65 years, preexisting renal dysfunction, volume depletion, concurrent use of nephrotoxic drugs, diabetes, and sepsis. An additional risk appears to be associated with IGIV products containing sucrose as a stabilizer (Panglobulin, Gammar-P) when a total dose $\geq 400\text{mg/kg}$ was given. Note that RespiGam also contains sucrose. <p><i>Hypersensitivity Reactions:</i></p> <ul style="list-style-type: none"> reportedly rare, however incidence may increase with use of large IM doses or repeated injections of immune globulins <p><i>Live Virus Vaccines (measles, mumps, rubella, varicella):</i></p> <ul style="list-style-type: none"> Antibodies present in immune globulin preparations may interfere with the immune response of live virus vaccines, especially when large doses of immunoglobulins are given. For many immune globulins, a live virus vaccine should not be administered within 3 months of immune globulin administration; a few immune globulins require an even longer period (5-11 months) before a live virus vaccine should be given; check individual manufacturer's recommendations for each product.
hepatitis B immune globulin, human (HBIG) – BayHep B, H-BIG, HyperHep, Nabi-HB		
immune globulin IM, human (IGIM; gamma globulin; IgG) – immune serum globulin USP ¹ , BayGam		
immune globulin IV, human (IGIV) – Gamimune N, Gammagard S/D, Gammar-P IV, Iveegam EN, Panglobulin, Polygam S/D, Sandoglobulin, Venoglobulin-I, Venoglobulin-S	PA	
antithymocyte globulin (equine) (ATG equine, LIG) – Atgam		
antithymocyte globulin (rabbit) (ATG rabbit) – Thymoglobulin		
rabies immune globulin IM, human (RIG) – BayRab, Imogam Rabies – HT		
Rho(D) immune globulin IM (Rho(D) IGIM) – BayRho-D Full Dose, Gamulin Rh, HypRho-D, RhoGAM		
Rho(D) immune globulin IM micro-dose (Rho(D) IG Micro-dose) – BayRho-D Mini Dose, HypRho-D Mini-Dose, MICRhoGAM, Mini-Gamulin Rh		
Rho(D) immune globulin IV, human (Rho(D) IGIV) – WinRho SDF		
respiratory syncytial virus immune globulin IV, human (RSV-IGIV) – RespiGam	PA	
tetanus immune globulin IM, human (TIG) – BayTet		
varicella-zoster immune globulin IM, human (VZIG) ¹		

¹ Product must be obtained through the Massachusetts Public Health Biologic Laboratories.

Table 2 – Hormones – Gonadotropin-Releasing Hormone Analogs

Drug Name	PA Status	Clinical Notes
Eligard (leuprolide)	PA	<p><i>For PA drugs, one of the following FDA-approved indications must be met. For unlabeled uses, approval will be considered based on current medical evidence.</i></p> <ul style="list-style-type: none"> • breast cancer (advanced) – Zoladex • central precocious puberty – Lupron • endometrial thinning – Zoladex • endometriosis – Lupron, Zoladex • prostatic cancer (advanced) – Eligard, Lupron, Trelstar, Viadur, Zoladex • prostatic carcinoma (Stage B2-C) – Zoladex • uterine leiomyomata – Lupron <p><i>Contraindications:</i></p> <ul style="list-style-type: none"> • pregnancy and lactation – all products • undiagnosed, abnormal vaginal bleeding: leuprolide, Lupron, Viadur, Zoladex
Lupron (leuprolide)	PA	
Trelstar (triptorelin)	PA	
Viadur (leuprolide)	PA	
Zoladex (goserelin)	PA	

Table 3 – Gastrointestinal Drugs – Histamine H₂ Antagonists/Proton Pump Inhibitors**H₂ Antagonists**

Drug Name	PA Status	Clinical Notes
Axid # (nizatidine)		<i>Optimize Dosing Regimen:</i> <ul style="list-style-type: none"> For duodenal or gastric ulcer treatment, administer total daily dose between evening meal and bedtime – ulcer healing is directly proportional to degree of nocturnal acid reduction. <i>Duration of Therapy:</i> <ul style="list-style-type: none"> duodenal ulcer (DU) – 4 weeks gastric ulcer (GU) – 8 weeks
Pepcid # (famotidine *)		
Tagamet # (cimetidine *)		
Zantac # (ranitidine *)		

Proton Pump Inhibitors (PPIs)

Drug Name	PA Status	Clinical Notes
Aciphex (rabeprazole)	PA	<i>Optimize Dosing Regimen:</i> <ul style="list-style-type: none"> For maximum efficacy, a PPI must be taken in a fasting state, just before or with breakfast. In general, for patients on PPIs it is not necessary to prescribe other antisecretory agents (e.g., H₂ antagonists, prostaglandins). If an antisecretory agent is prescribed with a PPI, the PPI should not be taken within 6 hours of the H₂ antagonist or prostaglandin. PPI's should not be taken on an "as needed" basis. <i>QD Dosing versus BID Dosing:</i> <ul style="list-style-type: none"> QD dosing is adequate for most individuals except for H. pylori treatment (PPI is BID for 1st two weeks of therapy). For pathological hypersecretory conditions, such as ZE Syndrome, a BID PPI regimen may be needed for high total daily doses. When/if a second dose is prescribed, it should be given just before the evening meal. <i>Apparent PPI Non-responder:</i> <ul style="list-style-type: none"> Careful history should be obtained to ensure appropriate timing of drug administration and no significant drug interactions (see above), before prescribing a second dose or switching to another PPI. <i>Duration of Therapy:</i> <ul style="list-style-type: none"> duodenal ulcer (DU) – 4 weeks (QD dosing) gastric ulcer (GU) – 8 weeks (QD dosing) H. pylori – 2 weeks (BID dosing) + 2 more weeks if DU using QD dosing and 6 more weeks if GU using QD dosing acute symptomatic GERD – 4-8 weeks (QD dosing) <i>NG Tube Administration:</i> <p>Prevacid (lansoprazole) capsules can be opened and the intact granules mixed with 40 ml. of apple juice and then administered through the NG tube. After administration, flush NG tube with additional apple juice. Prevacid suspension is not recommended for NG tube administration. It is a viscous liquid, and will thicken over time.</p> <i>Tablet/Capsule Administration:</i> <p>PPI tablets or the contents of PPI capsules should not be chewed, split, or crushed. For patients who have difficulty swallowing PPI capsules, the capsule can be opened and the intact granules can be sprinkled on applesauce. See specific product information for further information on liquids and foods compatible with capsule contents.</p>
Nexium (esomeprazole)	PA	
Prevacid (lansoprazole) capsules	PA > 16 years	
Prevacid (lansoprazole) suspension	PA > 16 years (except for LTC members)	
Prilosec (omeprazole)	PA	
Protonix (pantoprazole)		

This is a brand-name drug with FDA "A"-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA "A"-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

Table 4 – Hematologic Agents – Hematopoietic Agents

Drug Name	PA Status	Clinical Notes
Colony Stimulating Factors		For PA drugs, an FDA-approved indication must be met. For unlabeled uses, approval will be considered based on current medical evidence.
Leukine (sargramostim; GM-CSF)	PA	
Neulasta (pegfilgrastim)	PA	
Neupogen (filgrastim; G-CSF)	PA	
Interleukins		Monitoring: <ul style="list-style-type: none">colony stimulating factors (G-CSF, GM-CSF) – Certain drugs, such as corticosteroids and lithium may potentiate the myeloproliferative effects of colony stimulating factors; GM-CSF: fluid retention, occasional transient supraventricular arrhythmias and dyspnea may occur – use cautiously in patients with cardiac or pulmonary disease.erythropoietin – Evaluate iron status before and during therapy. Transferrin saturation should be at least 20% and serum ferritin at least 100 ng/ml. Most patients will eventually require supplemental iron.oprelvekin – Fluid retention will occur - use cautiously in patients with CHF or preexisting fluid collections (e.g., ascites, pericardial or pleural effusions).
Neumega (oprelvekin; IL-11)	PA	
Recombinant Human Erythropoietin		
Aranesp (darbepoetin alfa)	PA	
Epogen (epoetin alfa; EPO)	PA	
Procrit (epoetin alfa; EPO)	PA	

Table 5 – Immunologic Agents – Immunomodulators

Drug Name	PA Status	Clinical Notes
Actimmune (interferon gamma-1b)		<p><i>For PA drugs, one of the following FDA-approved indications must be met. For unlabeled uses, approval will be considered based on current medical evidence.</i></p> <ul style="list-style-type: none"> • AIDS-related Kaposi's sarcoma – Intron A, Roferon-A • Chronic granulomatous disease – Actimmune • CML – Roferon-A • Condylomata acuminata – Alferon N, Intron A • Crohn's disease – Remicade • Erythema nodosum leprosum – Thalomid • Follicular lymphoma – Intron A • Hairy cell leukemia – Intron A, Roferon-A • Hepatitis B (chronic) – Intron A • Hepatitis C (chronic) – Infergen, Intron A, Pegasys, PEG-Intron, Rebetrone • Malignant melanoma – Intron A • Multiple sclerosis – Avonex, Betaseron, Novantrone, Rebif • Osteopetrosis – Actimmune • Psoriasis, severe – Amevive • Psoriatic arthritis – Enbrel • Rheumatoid arthritis, severe – Enbrel, Humira, Kineret, Remicade • Rheumatoid arthritis, juvenile – Enbrel <p><i>Alfa interferons Precautions:</i></p> <ul style="list-style-type: none"> • Life-threatening or fatal neuropsychiatric, autoimmune, ischemic, and infectious disorders may be caused or aggravated by alfa interferons. Monitor patients closely with periodic clinical and laboratory evaluations. See manufacturers' information for full details.
Alferon N (interferon alfa-n3, human leukocyte derived)		
Amevive (alefacept)	PA	
Avonex (interferon beta-1a)		
Betaseron (interferon beta-1b)		
Enbrel (etanercept)	PA	
Humira (adalimumab)	PA	
Infergen (interferon alfacon-1)		
Intron A (interferon alfa-2b; IFN-alfa2; rIFN-α2; α-2-interferon)		
Kineret (anakinra)	PA	
Novantrone (mitoxantrone)		
Pegasys (peginterferon alfa-2a)		
PEG-Intron (peginterferon alfa-2b)		
Rebetrone (interferon alfa-2b recombinant + ribavirin)		
Rebif (interferon beta-1a)		
Remicade (infliximab)	PA	
Roferon-A (interferon alfa-2a; rIFN-A; IFLrA)		
Thalomid (thalidomide)	S.T.E.P.S. (restricted drug distribution program; only prescribers and pharmacists registered with this program may prescribe and dispense the drug)	

Table 6 – Impotence Agents

Drug Name	PA Status	Clinical Notes
Caverject (alprostadil, prostaglandin E ₁ ; PE ₁)	PA	<ul style="list-style-type: none"> Sildenafil may potentiate the hypotensive effects of nitrates, which in any form are contraindicated with use of sildenafil. Sildenafil is metabolized by cytochrome P450 enzymes 3A4 (major route) and 2C9 (minor route); use sildenafil cautiously with 3A4 inhibitors such as ketoconazole, erythromycin, or cimetidine.
Edex (alprostadil, prostaglandin E ₁ ; PE ₁)	PA	
Muse (alprostadil, prostaglandin E ₁ ; PE ₁)	PA	
Viagra (sildenafil)	PA	

Table 7 – Muscle Relaxants – Centrally Acting

Drug Name	PA Status	Clinical Notes
Banflex (orphenadrine)		<i>PA for Lioresal Intrathecal:</i> Use for spasticity of spinal cord origin (FDA-approved indication) or, in children for reducing spasticity in cerebral palsy (unlabeled use). Other unlabeled uses will be considered based on current medical evidence.
diazepam		
Flexeril # (cyclobenzaprine)		
Flexoject (orphenadrine)		
Flexon (orphenadrine)		
Lioresal Intrathecal (baclofen)	PA	<i>Precautions:</i> <ul style="list-style-type: none"> All agents within this class may cause drowsiness and dizziness. Patients should be advised of this and to avoid alcohol and other CNS depressants. anticholinergic effects – baclofen, cyclobenzaprine, orphenadrine, tizanidine cyclobenzaprine – structurally related to tricyclic antidepressants (TCAs); consider potential for similar adverse effects and drug interactions as with TCAs tizanidine – an α_2 agonist structurally related to clonidine; may cause hypotension; hepatocellular injury reported - monitor LFTs <i>Urine Discoloration:</i> <ul style="list-style-type: none"> orange or red-purple: chlorzoxazone brown, black or green: methocarbamol
Lioresal # (baclofen)		
Maolate (chlorphenesin)		
Norflex # (orphenadrine)		
Norgesic # (orphenadrine/aspirin/caffeine)		
Parafon Forte DSC # (chlorzoxazone)		
Remular-S # (chlorzoxazone)		
Robaxin # (methocarbamol)		
Skelaxin (metaxalone)		
Soma # (carisoprodol)		
Zanaflex # (tizanidine)		

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 8 – Narcotic Agonist Analgesics

Drug Name	PA Status	Clinical Notes
Diphenylheptanes		<p><i>Allergy:</i></p> <ul style="list-style-type: none">True systemic narcotic allergy, such as a generalized rash, or angioedema, is unusual. A local, itchy wheal formation at the site of narcotic injection, generalized pruritus (no rash) or flushing may occur, and is due to histamine release. Meperidine is less likely to release histamine than morphine or other phenanthrenes; histamine release is not associated with fentanyl or methadone. <p><i>Cross-Hypersensitivity:</i></p> <ul style="list-style-type: none">Systemic allergy manifestations, such as a generalized rash, or angioedema, although uncommon, are most likely to occur with natural opium alkaloids, such as morphine and codeine. If systemic allergy to morphine or codeine, a narcotic from a different chemical classification (i.e., diphenylheptanes, phenylpiperidines) should be selected. Ultram (tramadol) is structurally unrelated to opiates; however, the manufacturer states that it should not be used if there is previous hypersensitivity reaction to opiates. <p><i>Renal Dysfunction:</i></p> <ul style="list-style-type: none">Accumulation of certain narcotics in patients with significant renal dysfunction can lead to excess sedation, respiratory depression, delirium, myoclonus, or seizures.<ul style="list-style-type: none">- avoid use: meperidine- cautious use: codeine, hydrocodone, morphine <p><i>Constipation:</i></p> <ul style="list-style-type: none">Common adverse effect with chronic narcotic use; prescribe stool softener +/- laxative with narcotic. <p><i>Acetaminophen Hepatotoxicity:</i></p> <ul style="list-style-type: none">Acetaminophen has been associated with severe hepatotoxicity following acute and chronic ingestion.Maximum recommended dose of acetaminophen for adults is four grams/day.Be sure to consider and ask about all potential sources of acetaminophen (e.g., OTC, combination analgesics) when determining daily acetaminophen dose.Risk may increase with concurrent alcohol use, underlying liver disease, and/or the fasting state.
methadone (Dolophine #, Methadose #)		
propoxyphene (Darvon #)		
propoxyphene napsylate (Darvon N)		
propoxyphene napsylate/acetaminophen (Darvocet-N #)		
Phenanthrenes		
codeine

Allegra (fexofenadine)	PA	+/-	2+/3+	+/-
Allegra-D (fexofenadine/pseudoephedrine)	PA			
Clarinet (desloratadine)	PA	+/-	3+	+/-
loratadine (generics)		+/-	2+/3+	+/-

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

* The generic OTC and, if any, generic prescription versions of the drug are payable under MassHealth without prior authorization.

¹ Combinations of antihistamines and decongestants (for example, brompheniramine/pseudoephedrine) are payable under MassHealth, but are not listed in the antihistamine table unless PA is required for the combination.

² low to none = +/-; low = 1+; moderate = 2+; high = 3+ (Note: Pseudoephedrine, a sympathomimetic that may cause mild CNS stimulation, may lessen the sedative effect of antihistamines. Occasionally however, pseudoephedrine may also cause drowsiness. The antihistaminic and anticholinergic effects of antihistamines are not likely to be affected by the addition of pseudoephedrine.)

Table 13 – Statins

Drug Name	PA Status	Clinical Notes
Advicor (lovastatin/niacin)	PA	<p>LDL-lowering and Dose:</p> <p>The magnitude of the LDL cholesterol-lowering effect differs according to the specific statin and dose prescribed. LDL reduction is not proportional to dose increase. In general, dose adjustment should not be done prior to 4-6 weeks of therapy, the length of time needed for maximum lipid effect. Listed below is the % decrease in LDL cholesterol with various doses of statins:</p> <ul style="list-style-type: none"> atorvastatin: 10 mg – 38%, 20 mg – 46%, 40 mg – 51%, 80 mg – 54% fluvastatin: 20 mg – 17%, 40 mg – 23%, 80 mg (extended-release) – 36% lovastatin: 20 mg – 29%, 40 mg – 32%, 80 mg – 48% pravastatin: 10 mg – 19%, 20 mg – 24%, 40 mg – 34% simvastatin: 10 mg – 28%, 20 mg – 35%, 40 mg – 41%, 80 mg – 46% <p>Metabolism and Drug Interactions:</p> <p>Except for pravastatin, all statins are extensively metabolized by the cytochrome (CYP) P450 enzyme system (atorvastatin, lovastatin, simvastatin: CYP3A4, fluvastatin: CYP2C9). All statins, except for pravastatin, are highly protein-bound, and are therefore more likely than pravastatin to interact with other highly protein-bound drugs (e.g., warfarin). There are many potential drug interactions involving the CYP450 enzyme system and highly protein-bound drugs. Careful monitoring should be done in patients on statins and multiple medications.</p> <p>Food and Statin Use:</p> <p>Coadministration of food with lovastatin increases lovastatin's bioavailability by as much as 50%. For all other statins, the clinical significance of the statin-food interaction is small. Lovastatin should be administered with food. All other statins may be taken without regard to meals.</p> <p>Adverse Effects:</p> <ul style="list-style-type: none"> Hepatotoxicity: Although the risk of liver toxicity is low (i.e., elevation in liver transaminases > 3 times the upper limit of normal occurs in ~ 1% of patients), manufacturers of statins recommend that liver transaminases be monitored (see product package labeling). Risk of this toxicity may increase with increased dose. Myopathy: Severe myopathy is reported in 1/1000 patients, and is dose-related. It can lead to myoglobinuria and acute renal failure. Risk factors for statin-induced myopathy are drug-drug interactions, hepatic or renal failure, acute infection, or hypothyroidism. <p>Cost:</p> <p>DMA costs indicate that generic lovastatin, Lescol, and Lescol XL are much less expensive than all other brands of statins. Please keep this factor in mind when choosing a statin for a MassHealth member.</p>
Altacor (extended-release lovastatin)	PA	
Lescol (fluvastatin)		
Lescol XL (extended-release fluvastatin)		
Lipitor (atorvastatin)		
lovastatin		
Mevacor # (lovastatin)		
Pravachol (pravastatin)	PA	
Zocor (simvastatin)	PA	

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 14 – Triptans

Drug Name	PA Status	Clinical Notes
Amerge (naratriptan) tablet	PA	<p><i>FDA-Approved Indications:</i></p> <ul style="list-style-type: none"> acute treatment of migraine (all triptans) acute treatment of cluster headache episodes—Imitrex injection only Triptans are NOT intended for prophylactic therapy of migraines. <p><i>General contraindications (consult prescribing information for specific information regarding individual agents):</i></p> <ul style="list-style-type: none"> history, presence, symptoms, or signs of ischemic heart disease (e.g., angina, MI, stroke, TIA), coronary artery vasospasm, or other significant underlying cardiovascular disease uncontrolled hypertension concurrent use or use within 24 hours of ergotamine-containing products or ergot-type medications (e.g., dihydroergotamine, methysergide) concurrent use with MAO inhibitor therapy or within two weeks of MAO inhibitor discontinuation use within 24 hours of treatment with another triptan management of hemiplegic or basilar migraine hypersensitivity to the product or any of its ingredients <p><i>Do not exceed the maximum recommended dose per 24-hour period.</i></p> <p><i>Orally Disintegrating Tablets:</i></p> <ul style="list-style-type: none"> Place tablet on tongue, where it will be dissolved and swallowed with saliva. Inform phenylketonurics that tablets contain phenylalanine. <p><i>Migraine prophylaxis (e.g., amitriptyline, propranolol, timolol) may be considered for the following conditions:</i></p> <ul style="list-style-type: none"> migraine occurs \geq twice monthly and produces disability lasting \geq three days per month contraindication to, or failure of, acute treatments abortive medications are used $>$ twice per week other severe migraine conditions
Axert (almotriptan) tablet	PA > six units/month

Table 15 – Hypnotics

Drug Name	PA Status	Duration of Action	Clinical Notes
Ambien (zolpidem)	PA > 10 units/month	short	<ul style="list-style-type: none"> Hypnotics are primarily FDA-approved for transient or short-term treatment of insomnia. There is limited medical evidence on the safety and efficacy of prolonged use of hypnotics. Nonpharmacologic treatments, such as practicing good sleep hygiene, relaxation training, and cognitive therapy may be more effective than medications in some individuals. To avoid tolerance and dependence, use the lowest dose, intermittently, and for the shortest possible duration. Recommended hypnotic dosages are generally lower in the elderly. See “10 Tips for a Good Night’s Sleep” (www.state.ma/dma/providers/pharmacy/10-tips_GoodNightSleep.pdf).
Dalmane # (flurazepam)	PA > 10 units/month	long	
Doral (quazepam)	PA	long	
Halcion # (triazolam)	PA > 10 units/month	short	
ProSom # (estazolam)	PA > 10 units/month	intermediate	
Restoril # (temazepam)	PA > 10 units/month	intermediate	
Sonata (zaleplon)	PA > 10 units/month	ultra-short	

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 16 – Topical Corticosteroids

Drug Name	PA Status	Clinical Notes
I. Low Potency		Product Potency: <ul style="list-style-type: none">Relative potency of a product depends on the characteristics and concentration of the drug and the vehicle.Generally, ointments and gels are more potent than creams or lotions; however, some products have been formulated to yield comparable potency. Product Selection: <ul style="list-style-type: none">Selection of a specific corticosteroid, strength and vehicle depends on the nature, location, and extent of the skin condition, patient's age, and anticipated duration of treatment.Use the least potent corticosteroid that would be effective.Low potency agents are preferred for the face, intertriginous areas (e.g., groin, axilla), large areas, and children, to reduce the potential for side effects.Reserve higher potency agents for areas and conditions resistant to treatment with milder agents. Adverse Reactions: <ul style="list-style-type: none">Systemic absorption of topical corticosteroids has produced reversible HPA axis suppression, Cushing's syndrome, hyperglycemia, and glycosuria.Conditions that augment systemic absorption include application of more potent steroids, use over large surface areas, prolonged use, addition of occlusive dressings, and patient's age.Perform appropriate clinical and laboratory tests if a topical corticosteroid is used for long periods or over large areas of the body.With chronic conditions, gradual discontinuation of therapy may reduce the chance of rebound.

olmesartan (Benicar)	PA	
telmisartan (Micardis)	PA	
valsartan (Diovan)	PA	
valsartan/hydrochlorothiazide (Diovan HCT)	PA	

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 19 – Alpha-1 Adrenergic Blockers

Drug Name	PA Status	Clinical Notes
doxazosin (Cardura #)		<i>FDA-approved indications:</i> <ul style="list-style-type: none"> Hypertension: doxazosin, prazosin, prazosin/polythiazide, terazosin Benign prostatic hyperplasia (BPH): doxazosin, tamsulosin, terazosin <i>Dose and administration:</i> <ul style="list-style-type: none"> Doxazosin, prazosin, and terazosin: take first dose and subsequent first increased dose at bedtime to minimize lightheadedness and syncope. Titrate to therapeutic maintenance doses to minimize dizziness and orthostatic hypotension. If therapy is discontinued or interrupted for two or more days, reinstitute therapy cautiously. <i>PSA levels:</i> <ul style="list-style-type: none"> Alpha-1 adrenergic receptor antagonists do not affect PSA levels.
prazosin (generics)		
prazosin/polythiazide (Minizide)		
tamsulosin (Flomax)	PA	
terazosin (Hytrin #)		

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 20 – Anticonvulsants

Drug Name	PA Status	Clinical Notes
carbamazepine (Carbatrol, Epitol, Tegretol #)		<p><i>For PA drugs</i>, one of the following FDA-approved indications must be met.</p> <ul style="list-style-type: none"> epilepsy, adjunctive therapy-gabapentin, levetiracetam, tiagabine, topiramate postherpetic neuralgia-gabapentin <p>For unlabeled uses, approval will be considered based on current medical evidence.</p> <p><i>Precautions/warnings:</i></p> <ul style="list-style-type: none"> About 25% to 30% of patients who experience a hypersensitivity reaction to carbamazepine will experience a hypersensitivity reaction to oxcarbazepine. Carbamazepine has been associated with aplastic anemia and agranulocytosis. Hematologic studies should be performed before therapy is initiated. Felbamate is not a first-line antiepileptic agent and is recommended only in patients who have shown an inadequate response to alternative treatments and whose epilepsy is so severe that the benefits outweigh the potential risks of aplastic anemia or liver failure. Lamotrigine has been associated with serious rashes, which required hospitalization and/or discontinuation of treatment. Most cases of life-threatening rashes occurred within the first 2 to 8 weeks of treatment. Phenytoin may cause gingival hyperplasia; the incidence may be reduced by good oral hygiene, including frequent brushing and flossing. Valproic acid and its derivatives have been associated with hepatic failure resulting in fatalities. Liver function tests should be performed prior to initiating therapy and subsequently at frequent intervals, especially during the first 6 months of therapy. <p><i>See Pharmacy Program Anticonvulsant Initiative (www.state.ma/dma/providers/pharmacy/AnticonvulsantInitiative.pdf) for more information about PA requirements for anticonvulsants.</i></p> <p><i>See Pharmacy Program Anticonvulsant Q & A (www.state.ma/dma/providers/pharmacy/AnticonvulsantInitiative.pdf) for more information about PA requirements for anticonvulsants.</i></p>
clonazepam (Klonopin #)		
clorazepate (Tranxene-T #)		
diazepam (generics, Diastat)		
divalproex (Depakote)		
ethosuximide (Zarontin #)		
ethotoin (Peganone)		
felbamate (Felbatol)		
gabapentin (Neurontin)	PA > 18 years	
lamotrigine (Lamictal)		
levetiracetam (Keppra)	PA	
methsuximide (Celontin)		
oxcarbazepine (Trileptal)		
phenobarbital (generics)		
phenytoin (Dilantin, Phenytek)		
primidone (Mysoline #)		
tiagabine (Gabitril)	PA > 18 years	
topiramate (Topamax)	PA > 18 years	
valproate (Depacon, Depakene #)		
valproic acid (Depakene #)		
zonisamide (Zonegran)		

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 21 – Beta-Adrenergic Blocking Agents

Drug Name	PA Status	Adrenergic Receptor Blocking Activity	Clinical Notes
acebutolol (Sectral #)		β_1	<p><i>Receptor blocking selectivity:</i></p> <ul style="list-style-type: none"> β_1 receptors are predominant in the heart and kidney; β_2 receptors are predominant in the arteriolar smooth muscle, liver, lungs, and pancreas. Cardioselective beta-blockers possess greater affinity for β_1 receptors than β_2 receptors. At low doses, cardioselective beta-blockers may be safer than nonselective agents in patients with asthma, diabetes, COPD, and peripheral vascular disease. Cardioselective agents may also inhibit β_2 receptors at higher doses. Alpha-blockade has the potential to produce more orthostatic hypotension. <p><i>Intrinsic sympathomimetic activity (ISA):</i></p> <ul style="list-style-type: none"> Acebutolol, carteolol, penbutolol, and pindolol possess ISA. Agents with ISA may not be as cardioprotective as other beta-blockers and should not be used for myocardial infarction (MI) prophylaxis. <p><i>Use in heart failure:</i></p> <ul style="list-style-type: none"> Metoprolol extended release and carvedilol are approved for heart failure. <p><i>Use in diabetes:</i></p> <ul style="list-style-type: none"> Beta-blockers may mask some symptoms of hypoglycemia. Nonselective beta-blockers may potentiate insulin-induced hypoglycemia and delay recovery of serum glucose levels. <p><i>Other concomitant disorders:</i></p> <ul style="list-style-type: none"> Beta-blockers may offer advantages for hypertensive patients with the following conditions: angina, migraines, selected ventricular and supraventricular arrhythmias. All patients should receive a beta-blocker post MI, unless they have an absolute contraindication or have shown intolerance.
atenolol (Tenormin #)		β_1	
atenolol/chlorthalidone (Tenoretic #)			
betaxolol (Kerlone #)		β_1	
bisoprolol (Zebeta #)		β_1	
bisoprolol/hydrochlorothiazide (Ziac #)			
carteolol (Cartrol)	PA	$\beta_1 \beta_2$	
carvedilol (Coreg)	PA	$\beta_1 \beta_2 \alpha_1$	
esmolol (Brevibloc)		β_1	
labetalol (Trandate#, Normodyne #)		$\beta_1 \beta_2 \alpha_1$	
metoprolol (Lopressor #, Toprol)		β_1	
metoprolol/hydrochlorothiazide (Lopressor HCT)			
nadolol (Corgard #)		$\beta_1 \beta_2$	
nadolol/bendroflumethiazide (Corzide)			
penbutolol (Levitol)	PA	$\beta_1 \beta_2$	
pindolol (Visken #)		$\beta_1 \beta_2$	
propranolol (Inderal #)		$\beta_1 \beta_2$	
propranolol/hydrochlorothiazide (Inderide #)			
sotalol (Betapace #)		$\beta_1 \beta_2$	
timolol (Blocadren #)		$\beta_1 \beta_2$	
timolol/hydrochlorothiazide (Timolide)			

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 22 – Calcium Channel Blocking Agents

Table 22 Calcium Channel Blocking Agents		Clinical Notes
Drug Name	PA Status	<p><i>Indications:</i></p> <ul style="list-style-type: none">Nimodipine is only FDA approved for subarachnoid hemorrhage.Bepidril, diltiazem (short-acting), nifedipine (immediate-release), and nimodipine are not FDA approved for the treatment of essential hypertension.Sustained-release nifedipine and amlodipine have been shown to have comparable efficacy in African-Americans with hypertension. <p><i>Precautions/warnings:</i></p> <ul style="list-style-type: none">Formulations of calcium channel blockers that contain the same active ingredient may not be “A”-rated to each other and therefore, should not be interchanged.Two sustained-release verapamil products (Covera-HS and Verelan PM – not interchangeable) were designed to be given at bedtime. With a 4-5 hour delay in release, it is intended to prevent the early morning surge in blood pressure. <p><i>Adverse events:</i></p> <ul style="list-style-type: none">Side effects caused by vasodilation such as dizziness, flushing, headache, and peripheral edema, occur more frequently with dihydropyridines.
<i>Benzothiazepines</i>		
bepidril (Vascor)	PA	
diltiazem (Cardizem #, Cartia, Dilacor#, Tiazac)		
<i>Dihydropyridines</i>		
amlodipine (Norvasc)	PA	
amlodipine/benazepril (Lotrel)	PA	
enalapril/felodipine (Lexxel)	PA	
felodipine (Plendil)	PA	
isradipine (Dynacirc)	PA	
nicardipine (Cardene #)		
nifedipine (Adalat #, Procardia #, Nifedical)		
nimodipine (Nimotop)		
nisoldipine (Sular)	PA	
<i>Diphenylalkylamines</i>		
trandolapril/verapamil (Tarka)	PA	
verapamil (Calan #, Verelan #, Isoptin #, Covera-HS)		

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 23 – Respiratory Inhalant Products

Drug Name		PA Status	Clinical Notes
Anticholinergics			<p><i>Quick-relief medications:</i></p> <ul style="list-style-type: none">Inhaled short-acting selective beta2-agonists are therapy of choice for relief of acute symptoms.Increasing use of short-acting beta2- agonists or use of more than one canister/month may indicate over reliance on this drug and inadequate asthma control.Daily scheduled use of short-acting beta2- agonists is generally not recommended.Salmeterol, a long acting beta2-agonist, is not recommended for treatment of acute symptoms or exacerbations. <p><i>Long-term-control medications:</i></p> <ul style="list-style-type: none">Corticosteroids are the most potent and effective anti-inflammatory medications currently available.The incidence of oral candidiasis with inhaled corticosteroids may be reduced by using a spacer/holding chamber, rinsing the mouth with water after inhalation and, if appropriate, administering the inhaled corticosteroid less frequently.Long-acting inhaled beta2-agonists should be used in conjunction with anti-inflammatory medications and are especially beneficial in managing nighttime symptoms.Formoterol and salmeterol are long-acting inhaled beta2-agonists. <p><i>Exercise-induced bronchospasm:</i></p> <ul style="list-style-type: none">Inhaled selective beta2-agonists are the treatment of choice.
ipratropium, inhalation solution, inhaler (Atrovent #)			
Combination Products			
albuterol/ipratropium, inhalation solution (DuoNeb), inhaler (Combivent)			
fluticasone/salmeterol, diskus (Advair)			
Corticosteroids			
beclomethasone, inhaler (Qvar, Vanceril)			
budesonide, inhalation suspension, inhaler (Pulmicort)			
flunisolide, inhaler (AeroBid)			
flunisolide, inhaler (AeroBid -M)		PA	
fluticasone, diskus, inhaler, rotadisk (Flovent)			
triamcinolone, inhaler (Azmacort)			
Mast Cell Stabilizers			
cromolyn, inhalation solution, inhaler (Intal #)			
nedocromil, inhaler (Tilade)			
Sympathomimetics			
albuterol, inhalation solution (AccuNeb, Proventil)			
albuterol, inhaler (generics)			
albuterol, inhaler (Proventil, Proventil HFA, Ventolin, Ventolin HFA)		PA	
formoterol (Foradil)			
isoetharine, inhalation solution			
levalbuterol, inhalation solution (Xopenex)		PA	
metaproterenol, inhalation solution (Alupent #)			
metaproterenol, inhaler (Alupent)		PA	
pirbuterol, inhaler (Maxair)		PA	
salmeterol, diskus, inhaler (Serevent)			

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 24 – Atypical Antipsychotics

Drug Name	PA Status	Clinical Notes
aripiprazole (Abilify)	PA > 15 mg/day (effective 07/01/03)	<p><i>Division initiatives:</i></p> <ul style="list-style-type: none"> The Division does not consider olanzapine as first-line therapy for treatment of psychiatric illnesses due to its side effect profile and cost. PA will be required when a patient has an overlap of 60 days or more in prescriptions of aripiprazole, olanzapine, quetiapine, risperidone, and/or ziprasidone because there is limited scientific data to support the concomitant use of these atypical antipsychotics.
clozapine (Clozaril #)	PA > 900 mg/day (effective 07/01/03)	
olanzapine (Zyprexa)	PA > 20 mg/day (effective 07/1/03)	
quetiapine (Seroquel)	PA < 200 mg/day for more than 60 days or > 800 mg/day (effective 07/01/03)	
risperidone (Risperdal)	PA > 6 mg/day (effective 07/01/03)	
ziprasidone (Geodon)	PA > 160 mg/day (effective 07/01/03)	<p><i>Additional information:</i></p> <ul style="list-style-type: none"> Aripiprazole has a 75-hour half-life. Dosages should not be increased until after at least 2 weeks of therapy. Dosages higher than 10 or 15 mg/day have not been shown to be more effective than 10 or 15 mg/day. Clozapine may cause agranulocytosis; therefore, white blood cell counts must be performed before initiating therapy, during therapy (initially weekly then biweekly if appropriate) and for 4 weeks after discontinuing therapy. Olanzapine and clozapine should be used cautiously in patients with diabetes with periodic monitoring of weight and fasting glucose. Risperidone doses greater than 6 mg/day are associated with more extrapyramidal symptoms. <p><i>See Pharmacy Program Atypical Antipsychotics Initiative</i> www.state.ma/dma/providers/pharmacy/Atypical-Antipsychotics-Initiative.pdf for more information about PA requirements for atypical antipsychotics.</p>

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 25 – Intranasal Corticosteroids

Drug Name	PA Status	Clinical Notes
beclomethasone (Beconase AQ), nasal spray	PA > 1 inhaler/month (effective 07/01/03)	<ul style="list-style-type: none"> Intranasal corticosteroids are effective in managing symptoms of itching, nasal congestion, rhinorrhea and sneezing associated with perennial and seasonal rhinitis. Symptoms may begin to improve in 2-3 days but full benefit may not be achieved for 2-3 weeks. Dosage may be reduced after a response has been achieved. At the recommended doses, side effects are usually minimal and include stinging, sneezing, headache and epistaxis.
budesonide (Rhinocort Aqua), nasal spray	PA > 1 inhaler/2 months (effective 07/01/03)	
flunisolide (generics, Nasalide#, Nasarel), nasal spray	PA > 1 inhaler/month (effective 07/01/03)	
fluticasone (Flonase), nasal spray	PA > 1 inhaler/month (effective 07/01/03)	
mometasone (Nasonex), nasal spray	PA > 1 inhaler/month (effective 07/01/03)	
triamcinolone (Nasacort, Nasacort AQ), nasal spray	PA > 1 inhaler/month (effective 07/01/03)	

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Table 26 – Oral Antidiabetic Agents

Drug Name	PA Status	Clinical Notes
Alpha-Glucosidase Inhibitors		<u>Alpha-glucosidase inhibitors:</u>
acarbose (Precose)	PA	<ul style="list-style-type: none"> If hypoglycemia occurs, must treat with glucose rather than sucrose.
miglitol (Glyset)	PA	
Biguanides		<ul style="list-style-type: none"> Not recommended for patients with significant renal dysfunction (serum creatinine > 2 mg/dL). Contraindications include inflammatory bowel disease, colonic ulceration, and intestinal obstruction.
metformin (Glucophage #)		
metformin extended release (Glucophage XR)		
Meglitinides		<u>Biguanides:</u>
nateglinide (Starlix)	PA	<ul style="list-style-type: none"> Hold metformin therapy for 48 hours after receiving iodinated contrast.
repaglinide (Prandin)	PA	<ul style="list-style-type: none"> May cause lactic acidosis; contraindicated in patients predisposed to acidosis (e.g., major surgery, congestive heart failure, hepatic failure).
Sulfonylureas - First Generation		<ul style="list-style-type: none"> Contraindicated in females and males with renal disease or dysfunction (e.g., serum creatinine greater than or equal to 1.4 mg/dL and 1.5 mg/dL, respectively).
acetohexamide		
chlorpropamide (Diabenese #)		
tolazamide (Tolinase #)		
tolbutamide		
Sulfonylureas - Second Generation		<ul style="list-style-type: none"> In small studies, some obese women with polycystic ovary syndrome experienced a return of normal menses and ovulation when treated with metformin.
glimepiride (Amaryl)	PA	
glipizide (Glucotrol #)		
glipizide extended-release (Glucotrol XL)	PA	
glyburide (Diabeta)	PA	<u>Meglitinides:</u>
glyburide (Micronase #)		<ul style="list-style-type: none"> Take <u>before</u> meals; hold dose if meal is missed.
glyburide, micronized (Glynase #)		<ul style="list-style-type: none"> Use with caution in patients with hepatic impairment.
Thiazolidinediones		<u>Sulfonylureas:</u>
pioglitazone (Actos)		<ul style="list-style-type: none"> Use with caution in elderly patients, and patients with renal or hepatic impairment.
rosiglitazone (Avandia)		
Combination Products		<u>Thiazolidinediones:</u>
glipizide/metformin (Metaglip)	PA	<ul style="list-style-type: none"> Use with caution in patients with edema.
glyburide/metformin (Glucovance)	PA	<ul style="list-style-type: none"> Not recommended for patients with NYHA class III-IV cardiac status.
metformin/rosiglitazone (Avandamet)	PA	<ul style="list-style-type: none"> Not recommended for patients with liver function tests greater than 2.5 times normal. May cause resumption of ovulation in premenopausal anovulatory women with insulin resistance.
		<u>Pregnancy/lactation:</u>
		<ul style="list-style-type: none"> Insulin is the agent of choice during pregnancy and lactation.

This is a brand-name drug with FDA “A”-rated generic equivalents. Prior authorization is required for the brand, unless a particular form of that drug (for example, tablet, capsule, or liquid) does not have an FDA “A”-rated generic equivalent.

Antidepressant Prior Authorization Request

The Division reviews requests for prior authorization (PA) on the basis of medical necessity only. If the Division approves the request, payment is still subject to all general conditions of MassHealth, including current member eligibility, other insurance, and program restrictions. The Division will notify the provider and member of its decision. Keep a copy of this form for your records. If faxing this form, please use black ink.

PA is required for Celexa, Effexor, Lexapro, Paxil, Prozac Weekly, Sarafem, Serzone, Zoloft, and brand-name multiple-source antidepressants that have an FDA "A"-rated generic equivalent. **PA is not needed for bupropion, fluoxetine, fluvoxamine, mirtazapine, Remeron SolTab, trazodone, tricyclic antidepressants, or Wellbutrin SR.** Additional information about antidepressants can be found within the MassHealth Drug List at www.mass.gov/dma.

Hypnotic Prior Authorization Request

The Division reviews requests for prior authorization (PA) on the basis of medical necessity only. If the Division approves the request, payment is still subject to all general conditions of MassHealth, including current member eligibility, other insurance, and program restrictions. The Division will notify the provider and member of its decision. Keep a copy of this form for your records. If faxing this form, please use black ink.

PA is required for Doral (single-source brand-name benzodiazepine) and any brand-name multiple-source benzodiazepine that has an FDA "A"-rated generic equivalent as identified by the **Approved Drug Products with Therapeutic Equivalence Evaluations** (also called the "Orange Book").

PA is also required for quantity requests greater than 10 units per month for hypnotics. Additional information about hypnotic use can be found within the MassHealth Drug List at www.mass.gov/dma.

Section II

Please attach supporting documentation (e.g., copies of medical records, office notes, sleep evaluation) for your response to **each** question.

If the request is for quantities greater than 10 units per month of a hypnotic, please attach a detailed description of your treatment plan of the condition for which you have requested the hypnotic. Include all nonpharmacologic and pharmacologic interventions, therapeutic endpoints, and a list of the member's current medications.

A. Indication for hypnotic

- ☐ Acute insomnia
☐ Other _____

☐ Transient insomnia

B. Is insomnia secondary to a vital concurrent medication or diagnosis?

- ☐ Yes. Briefly describe and attach documentation.

☐ No.

C. Has member had a sleep evaluation?

- ☐ Yes. Briefly describe and attach documentation.

☐ No. Explain why not.

D. Has member been counseled on good sleep hygiene practices?

- ☐ Yes. Briefly describe and attach documentation.

☐ No. Explain why not.

E. Is request for quantities greater than 10 units per month of a hypnotic?

- ☐ Yes. Briefly describe and attach documentation, including detailed treatment plan.

☐ No.

--	---

Diagnostic studies performed (include dates of studies)

Medication information

Important note: For maximum efficacy, a proton pump inhibitor (PPI) must be taken in a fasting state, just before or with breakfast. If a second dose is necessary, the second dose should be given just before the evening meal. In general, it is not necessary to prescribe other antiseecretory agents (H₂ antagonists, prostaglandins) for patients on PPIs. If an antiseecretory agent is prescribed with a PPI, the PPI should not be taken within 6 hours of the antiseecretory agent.

PPI requested	Dose, frequency, and duration of PPI	Drug NDC (if known)
Has member tried Protonix? (Note: Protonix does not require prior authorization.)		
<input type="checkbox"/> Yes. Provide the following information about the use of Protonix.		<input type="checkbox"/> No. Explain why not.

Brand-Name Drug Prior Authorization Request

The Division reviews requests for prior authorization (PA) on the basis of medical necessity only. If the Division approves the request, payment is still subject to all general conditions of MassHealth, including current member eligibility, other insurance, and program restrictions. The Division will notify the provider and member of its decision. Keep a copy of this form for your records. If faxing this form, please use black ink.

Prescribers must obtain PA from the Division for any brand-name multiple-source drug that has an FDA "A"-rated generic equivalent as identified by the **Approved Drug Products with Therapeutic Equivalence Evaluations** (also called the "Orange Book"). Additional information about which drugs require PA can be found within the MassHealth Drug List at www.mass.gov/dma.

Comments/reasons for pended or denied decision

MassHealth Pharmacy Program Anticonvulsant Initiative

- 1. The following generic anticonvulsants DO NOT require prior authorization (PA). PA is required for the brand name product, unless a particular form of that drug does not have a FDA “A” rated generic equivalent. Brand name Dilantin (phenytoin), however, does not require PA.**

carbamazepine
clonazepam
clorazepate
diazepam
ethosuximide
phenobarbital
phenytoin
primidone
valproate
valproic acid

- 2. The following brand name anticonvulsants, in any dosage form, DO NOT require PA:**

Carbatrol (carbamazepine)
Celontin (methsuximide)
Depakote (divalproex)
Dilantin (phenytoin)
Felbatol (felbamate)
Lamictal (lamotrigine)
Mebaral (mephobarbital)
Peganone (ethotoin)
Phenytek (phenytoin)
Trileptal (oxcarbazepine)
Zonegran (zonisamide)

- 3. The following anticonvulsants DO require prior authorization effective 6/2/03:**

Gabitril (tiagabine)	PA > 18 years
Keppra (levetiracetam)	PA
Neurontin (gabapentin)	PA > 18 years
Topamax (topiramate)	PA > 18 years

MassHealth Pharmacy Program Antidepressant Initiative

1.A. The following antidepressant drugs **DO NOT** require prior authorization (PA):

amoxapine	mirtazapine
bupropion	Remeron Sol Tab (mirtazapine soluble tablet)
fluoxetine	trazodone
fluvoxamine	tricyclic antidepressants
maprotiline	Wellbutrin SR (bupropion sustained release)
MAO Inhibitors	

B. The following antidepressant drugs **DO** require prior authorization, unless criteria C.i. and/or C.ii. below have been met:

Celexa (citalopram) – PA	Prozac Weekly (fluoxetine) – PA
Effexor (venlafaxine) – PA	Remeron (mirtazapine) – PA
Lexapro (escitalopram) – PA	Sarafem (fluoxetine) – PA
Luvox (fluvoxamine) – PA	Serzone (nefazodone) – PA
Paxil (paroxetine) – PA	Zoloft (sertraline) – PA
Prozac (fluoxetine) – PA	

C. Antidepressant drug PA modifications for stable patients, treatment failure, and polypharmacy:

i. Stable patients

No PA will be required for an antidepressant prescription (and the prescriber will not be required to submit a paper PA form) if, over the last six months, the patient has filled a prescription for a cumulative supply of at least 100 days of any antidepressant medication, **except** when the addition of this drug would constitute polypharmacy (see C. iii. below). *

ii. Treatment failure

No PA is required for an antidepressant prescription (and the prescriber will not be required to submit a paper PA form) if a patient has received a consecutive 45-day treatment with either fluoxetine or fluvoxamine within the past 12 months, **except** when the addition of this drug would constitute polypharmacy (see C.iii. below). *

iii. Polypharmacy

PA is required when the patient has an overlap of 60 days or more in prescriptions for any dosage form of two or more of the following drugs:

Celexa (citalopram)	Luvox (fluvoxamine)
Effexor (venlafaxine)	Paxil (paroxetine)
fluoxetine	Prozac (fluoxetine)
fluvoxamine	Prozac Weekly (fluoxetine)
Lexapro (escitalopram)	Sarafem (fluoxetine)
	Zoloft (sertraline)

The Division encourages prescribers to use the Antidepressant Prior Authorization Request form when requesting prior authorization for any of the above antidepressants. See the Antidepressants Table for more information about selected antidepressants.

** Note: The decision on whether PA is required is based upon information available in the MassHealth pharmacy database. The MassHealth database contains member drug utilization information exclusive to MassHealth, and no other health plans.*

MassHealth Pharmacy Program Atypical Antipsychotic Initiative

1. Atypical antipsychotics DO require prior-authorization (PA) for the following dosages effective 07/01/03:

Abilify (aripiprazole)	PA > 15 mg/day
clozapine (generic)	PA > 900 mg/day
Geodon (ziprasidone)	PA > 160 mg/day
Risperdal (risperidone)	PA > 6 mg/day
Seroquel (quetiapine)	PA < 200 mg/day for more than 60 days or > 800 mg/day
Zyprexa (olanzapine)	PA > 20 mg/day

2. PA will be required for polypharmacy, which is defined as an overlap of 60 days or more in prescriptions (for any dosage form) of two or more of the following atypical antipsychotics, effective 07/01/03:

Abilify (aripiprazole)
Geodon (ziprasidone)
Risperdal (risperidone)
Seroquel (quetiapine)
Zyprexa (olanzapine)

3. Generic clozapine does not require prior-authorization (PA) for polypharmacy. Brand name Clozaril requires PA because it has a FDA “A”-rated generic.

ANTICONVULSANTS QUESTIONS AND ANSWERS

1. **Question:** Why is MassHealth requiring prior authorization (PA) for some anticonvulsants?

Answer: The recently released FY 04 Massachusetts state budget requires significant cost avoidance in the MassHealth Pharmacy Program. The Division of Medical Assistance (the Division) has been working to find clinically responsible ways to save money while maintaining enrollment and benefit levels, and continuing to provide effective care to MassHealth recipients. The Division has identified that anticonvulsants are frequently prescribed for conditions other than seizure disorders. Many of these prescribing practices are not supported by the current medical literature and/or more cost-effective alternatives are available.

2. **Question:** How does the Division plan to accomplish these savings?

Answer: The tool that makes this strategy operational is the MassHealth Drug List (the List). The List, implemented in August of 2002, is one of the vehicles by which the Pharmacy Program manages dramatically rising pharmaceutical costs. The List, which can be found on the Division's Web site at www.mass.gov/dma, is an alphabetical list of commonly prescribed drugs and therapeutic class tables. These tables provide a view of drugs within their respective therapeutic classes, along with any PA requirements and clinical information. The List will eventually include all therapeutic classes related to the treatment of medical disorders. The Division's PA policies regarding certain anticonvulsants will become effective June 2, 2003.

3. **Question:** Which anticonvulsants do not require PA?

Answer: Generic anticonvulsants and some brand name anticonvulsants **do not require PA**. PA is required for the brand name product, unless a particular form of that drug does not have a FDA "A" rated generic equivalent. Brand name Dilantin (phenytoin), however, does not require PA. The following generic and brand name anticonvulsants, in any dosage form, **do not require PA**.

carbamazepine
clonazepam
clorazepate
diazepam
ethosuximide
phenobarbital
phenytoin
primidone
valproate

valproic acid

Carbatrol (carbamazepine)
Celontin (methsuximide)
Depakote (divalproex)
Dilantin (phenytoin)
Felbatol (felbamate)
Lamictal (lamotrigine)
Mebaral (mephobarbital)
Peganone (ethotoin)
Phenytek (phenytoin)
Trileptal (oxcarbazepine)
Zonegran (zonisamide)

4. **Question:** Which anticonvulsant medications **require PA**?

Answer: The following anticonvulsant medications **require PA**.

Gabitril (tiagabine)	PA > 18 years
Keppra (levetiracetam)	PA
Neurontin (gabapentin)	PA > 18 years
Topamax (topiramate)	PA > 18 years

5. **Question:** Why do Gabitril, Keppra, Neurontin and Topamax have PA requirements?

Answer: These anticonvulsants are FDA-approved as adjunctive therapy for managing seizure disorders. Neurontin has an additional indication for the management of postherpetic neuralgia. They are not FDA-approved as monotherapy for seizure disorders, nor first-line therapy for any other medical condition.

6. **Question:** Why does Keppra have different PA requirements than Gabitril, Neurontin and Topamax?

Answer: The manufacturer states that the safety and effectiveness of Keppra has not been established in patients less than 16 years of age.

7. **Question:** Will MassHealth pay for remaining refills on a prescription written before any PA requirement went into effect?

Answer: Yes, MassHealth will pay for any remaining refills, up to 6 months or 5 monthly refills (whichever comes first), on an otherwise valid prescription that was written before a PA requirement for the drug went into effect. However, at the end of the six (6)-month or five (5)-refill period, the physician must request PA to continue therapy with this anticonvulsant. (See 4. above for PA requirements for anticonvulsants.)

PHARMACOLOGICAL TREATMENT OF DEPRESSION QUESTIONS AND ANSWERS

1. **Question:** Why is MassHealth requiring prior authorization (PA) for some antidepressants?
Answer: The recently released FY 04 Massachusetts state budget requires significant cost avoidance in the MassHealth Pharmacy Program. The Division of Medical Assistance (the Division) has been working to find clinically responsible ways to save money while maintaining enrollment and benefit levels, and continuing to provide effective care to MassHealth members.
2. **Question:** How does the Division plan to accomplish these savings?
Answer: In order to advise the formulation of clinically appropriate, cost-effective psychopharmacy policies, the Division convened an expert workgroup of child and adult psychopharmacologists, pharmacists, neurologists, internists, and pediatricians. In addition, representatives of stakeholder organizations, such as NAMI and the Massachusetts Behavioral Health Partnership, have been working for approximately one year to develop a strategy for managing psychiatric medications that will ensure patient access to a range of safe and effective medications while encouraging clinically sound prescribing practices. This strategy for managing the cost of treating depression includes identifying several reference drugs and putting others on PA.
3. **Question:** How will this strategy be put into operation?
Answer: The tool that makes this strategy operational is the MassHealth Drug List (the List). The List, implemented in August of 2002, is one of the vehicles by which the Pharmacy Program manages dramatically rising pharmaceutical costs. The List, which can be found on the Division's Web site at www.mass.gov/dma, is an alphabetical list of commonly prescribed drugs and therapeutic class tables. These tables provide a view of drugs within their respective therapeutic classes, along with any PA requirements and clinical information. The List will eventually include all therapeutic classes related to the treatment of medical disorders. The Division's PA policies regarding certain antidepressants will become effective on the List May 1, 2003.
4. **Question:** What are the medications for treating depression that do not require PA?
Answer: The following antidepressants **do not require PA:**
 - amoxapine
 - bupropion
 - fluoxetine
 - fluvoxamine
 - MAOIs
 - maprotiline
 - mirtazapine
 - trazodone

tricyclic antidepressants
Wellbutrin SR (bupropion sustained release)
Remeron Sol Tab

5. **Question:** What are the medications for treating depression that **do** require PA?

Answer: The following antidepressants **DO** require PA effective 5/1/03:

Celexa (citalopram)
Effexor (venlafaxine)
Lexapro (escitalopram)
Luvox (fluvoxamine)
Paxil (paroxetine)
Prozac (fluoxetine)
Prozac Weekly (fluoxetine)
Sarafem (fluoxetine)
Serzone (nefazodone)
Zoloft (sertraline)

6. **Question:** What is the Division's policy about duplicative treatment with antidepressants?

Answer: As the Division stated in its earlier letters to prescribers, there is minimal scientific evidence to support the practice of the extended simultaneous prescribing (60 days or greater) of two SSRIs for the same person. In addition, there is no scientific evidence that prescribing Effexor and an SSRI simultaneously improves clinical outcomes. In both of these cases, prescribers must request PA for this duplicative therapy in order for MassHealth to pay for the medication.

7. **Question:** Is fluoxetine safe for elderly patients given its long half-life?

Answer: Yes, fluoxetine has been shown to be safe and effective in managing depression in the elderly. A lower initial dose (5mg) or a longer dosing interval is recommended because elderly patients are more sensitive to medications, and fluoxetine has a long half-life. Shorter acting medications are not necessarily safer for elderly patients than longer acting medications.

8. **Question:** Reference drugs for the MassHealth Drug List include generics when clinically appropriate. Why is the brand-name drug Wellbutrin SR (bupropion sustained release) included on the list without PA?

Answer: An expert panel recommended that bupropion be available on the List as another treatment option for the management of depression. Bupropion is available generically in an immediate release tablet, but not in the sustained release formulation. The sustained release formulation (Wellbutrin SR) produces less lowering of the seizure threshold than the immediate release product; therefore the sustained release formulation does not require PA.

9. **Question:** Will patients who are clinically stable on a medication that requires PA be required to change medications?

Answer: We will not ask prescribers to change the medication regimen for patients who are clinically stable. The Division will generally consider a patient as clinically stable if, over the last six months, the patient has

filled a prescription for a cumulative supply of at least one hundred days of any antidepressant medication. If these criteria are met, the computer system will automatically override the PA requirement and permit the prescription to be filled, except for a duplicative antidepressant treatment (See 6). The Division suggests that prescribers reassure their patients who are stable on a particular regimen that they will be able to stay on that regimen.

10. **Question:** Will MassHealth pay for remaining refills on a prescription written before any PA requirement went into effect?

Answer: MassHealth will pay for any remaining refills, up to 6 months or 5 monthly refills (whichever comes first), on an otherwise valid prescription that was written before a PA requirement for the drug went into effect. However, at the end of the six-month or five-refill period, the physician must request PA for any medication other than those antidepressants that are reference drugs, unless the patient is stable (see 9. above).

11. **Question:** What is the recommended strategy for a particular patient who does not respond to any of the reference drugs?

Answer: For a patient with an inadequate response to any reference drug after a minimum of four weeks, raise the dose by increments, not generally to exceed the maximum recommended dose. Recommend other therapeutic modalities to the patient to help manage symptoms until the patient is stabilized. For example, consider referral to individual or group psychotherapy, to vocational rehab or day treatment, or, if the patient meets hospital level of care criteria, to an inpatient treatment setting. Information about sleep hygiene on the Pharmacy Web page may be helpful. If there is no further improvement in another 2-4 weeks, switch the patient to another antidepressant, following appropriate clinical procedures. No prior approval will be required, as long as the patient has received a consecutive forty-five-day treatment with either fluoxetine or fluvoxamine within the past twelve months, except for a duplicative antidepressant treatment (See 6. above).

12. **Question:** What if a patient has only a partial response to any of the reference drugs?

Answer: It is generally recommended that patients started on a reference drug (fluoxetine or fluvoxamine) be continued on that drug for a minimum of forty-five days. However, if a patient's response has clearly plateaued at an inadequate level or diminished after 45 days, the prescriber can switch to another antidepressant without requesting PA. Prescribers must request PA for a different medication if it is not on the reference list, unless the patient has received a consecutive forty-five-day treatment with either fluoxetine or fluvoxamine within the past twelve months. Note that PA must be requested for duplicative antidepressant treatment (See 6. above).

13. **Question:** I am not familiar with the PA process. How do I find out about the process for requesting PA?

Answer: Go to the Division's website located at www.mass.gov/dma. Click on "Pharmacy" to go to the main pharmacy page, and then click on "PA Forms and Instructions." You will discover that a specific PA form has been created for antidepressant drugs.

Question: What is the turnaround time for getting a response to a PA request from the MassHealth DUR program?

Answer: The DUR program is required to render a response within 24 business hours of the receipt of the PA request.

14. **Question:** Whom can I contact if I have other questions?

Answer: For questions about a specific PA request, please call the DUR program at 1-800-745-7318. For concerns about the PA program for pharmacy please write to:

Annette Hanson MD, MBA, Medical Director
Office of Clinical Affairs
Division of Medical Assistance
600 Washington Street
Boston, MA 02111

8. Question: What form should I use to request PA for Gabitril, Keppra, Neurontin or Topamax?

Answer: To request PA for Gabitril, Keppra, Neurontin or Topamax, please complete the Drug Prior Authorization Request form and fax or send to the DUR Program (fax number and address are on the form).

9. Question: Who should complete the PA request form if the medication was started in the hospital?

Answer: If possible, the inpatient prescriber should complete the PA request form.

10.Question: What is the turnaround time for getting a response to a PA request from the MassHealth DUR program?

Answer: The DUR program is required to render a response within 24 hours of the receipt of the PA request.

11.Question: Whom should I contact if I have other questions?

Answer: For questions about a specific PA request, please call the DUR Program at 1-800-745-7318. For concerns about the PA program for pharmacy, please write to:

Annette Hanson MD, MBA, Medical Director
Office of Clinical Affairs
Division of Medical Assistance
600 Washington Street
Boston, MA 02111

10 Tips for a Good Night's Sleep

1. **Keep consistent bedtimes and wake times seven days a week** (even after a "bad" night).
2. A person should only stay in bed equal to the number of hours of sleep they are achieving per night (for example, if you are getting six hours of sleep per night you should plan bedtime and wake time as six hours apart). **Many insomniacs spend far too much time in bed**, attempting to "squeeze" out a few more minutes of sleep.
3. If you have difficulty getting to sleep within 20 minutes, **get out of bed** and do something relaxing and distracting. For many people this is reading. **Do not do housework, bills, work, or anything that is too stimulating within two hours of bedtime or during a nighttime awakening.**
4. Although some people's insomnia is helped by a **nap** at midday, for most, it **will interfere with falling asleep that night.**
5. **Avoid alcohol** within five hours of bedtime. Alcohol is a poor hypnotic and causes nighttime awakenings.
6. **Avoid caffeine** (coffee, tea, soda, chocolate) after noon. Even if it doesn't prevent you from falling asleep, it can cause shallow sleep or nighttime awakenings.
7. **Avoid** going to bed on either an **empty stomach or a full stomach.** A light snack may be of value.
8. **Bedrooms should be quiet, safe, and relaxing.** Clocks should face away from the bed, so as not to "count down" the minutes until morning.
9. **Daily exercise** will improve insomnia, although the effects may not be immediate.
10. **Schedule "worry time"** earlier in the day, so as to consider the day's problems and find some resolution **before** getting into bed.
